

# UBC Strategic Forest Planning Review and Technical Analysis: North Cowichan Municipal Forest Reserve

**Drs. Brad Seely & Clive Welham**  
**3GreenTree Ecosystem Services Ltd.**  
**& Faculty of Forestry, UBC**

**Dr. Peter Arcese, Prof./FRBC Chair**  
**Forest & Conservation Sciences, UBC**

**Dr. Stephen Sheppard, Prof.**  
**Forest Resources Management, UBC**

# Goals & Objectives

1. Review past management activities & regional context
2. Develop spatial data resources
3. Understanding management goals and evaluating outcomes
4. **Multi-objective scenario analysis**
5. Assess feasibility of developing a C project
6. Support for development of forest management plans

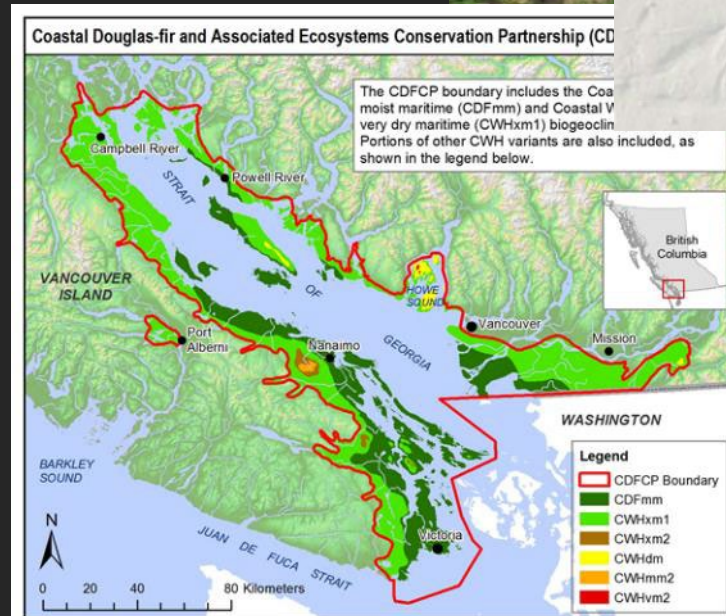

# Regional Context:

## Coastal Douglas-fir Forests of the Georgia Basin

- 49% Converted to Human Use
- < 3% Pre-settlement Forest Intact
- > 80% Privately-owned
- >153 Species At Risk
- **Most Imperiled Ecosystem in BC**

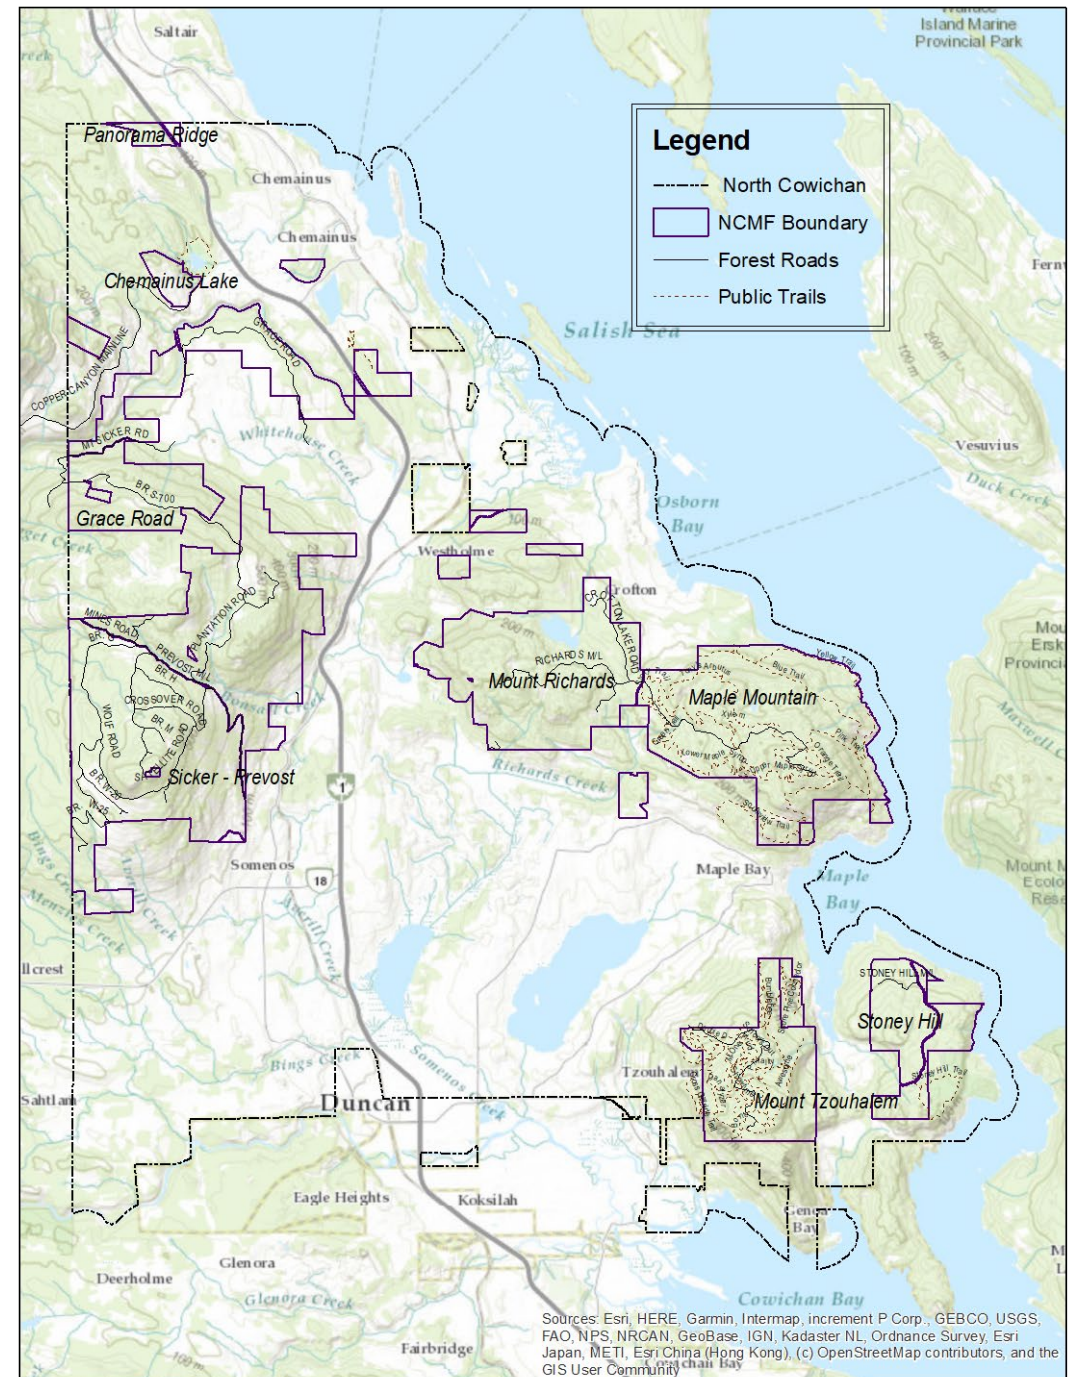

**TAKING NATURE'S PULSE**  
**THE STATUS OF BIODIVERSITY**  
**IN BRITISH COLUMBIA**  
 2008  
 SUMMARY REPORT

# Evaluation and Development of Spatial Data Resources

## Location of North Cowichan Municipal Forest Reserve

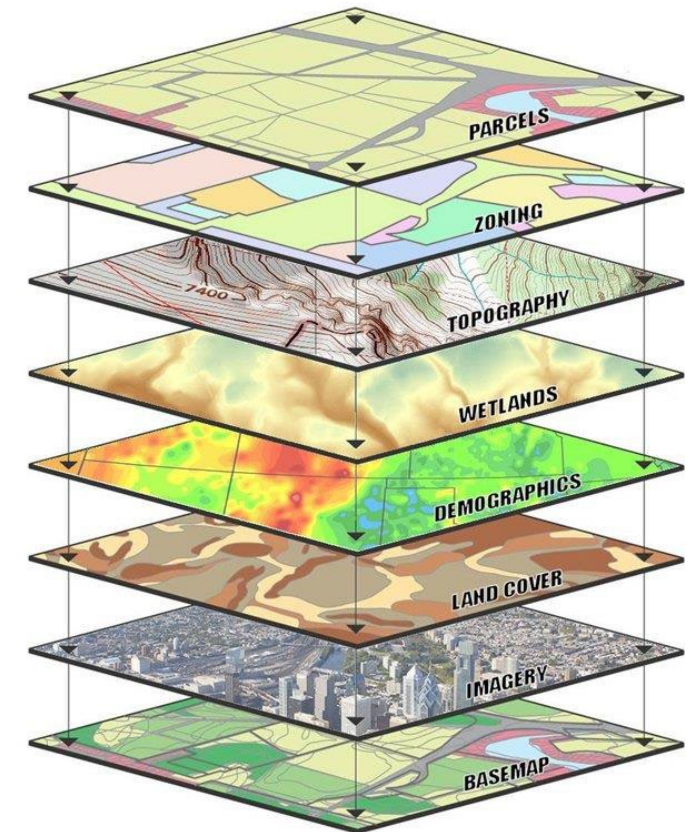

- Consists of 6 main holdings around local mountains
- ~ 5,470 ha
- Multi-objective management
- Annual logging allowance of 20,000 m<sup>3</sup> per year

# Evaluation and Development of Spatial Data Resources

## Mapping Key Forest Resources

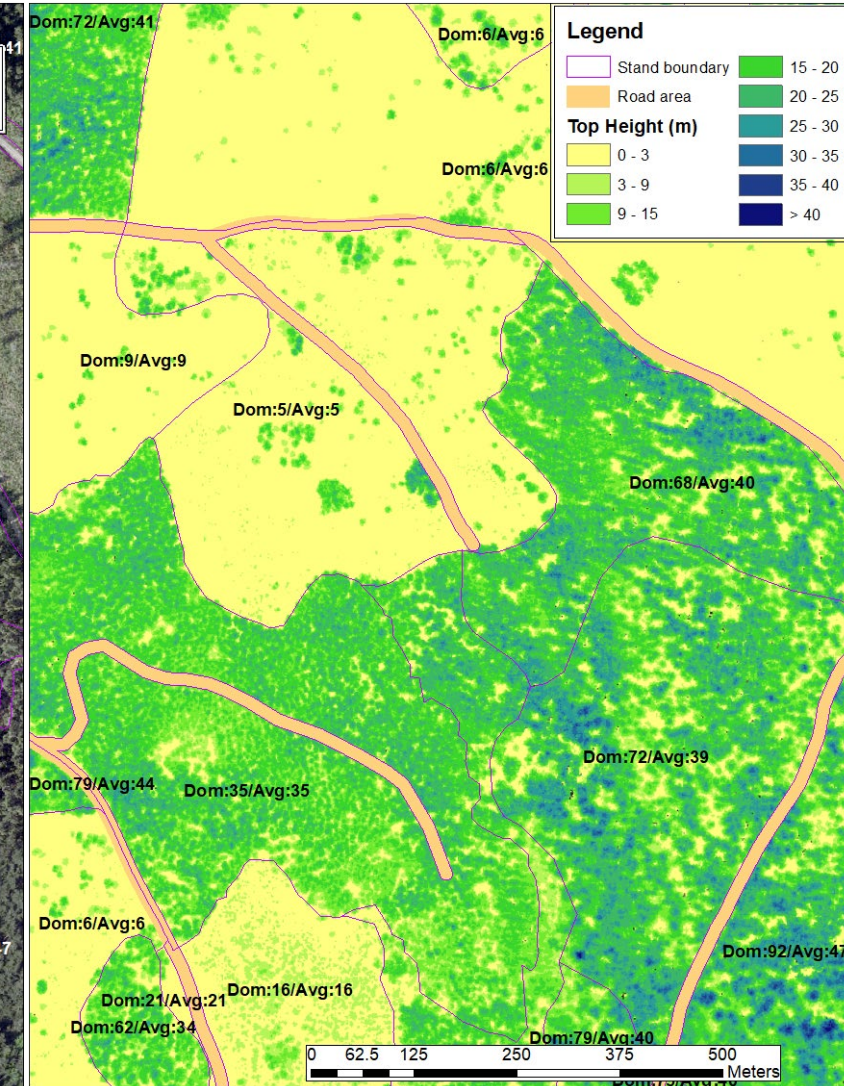

- Ownership boundary layers
- Forest vegetation mapping (stratified by tree species & stand age)
- Past management (harvest blocks)
- Streams and water bodies
- Important watersheds
- Sensitive ecosystems and habitats
- Visually sensitive areas
- Roads and trails
- Protected and Culturally important areas

# Evaluation and Development of Spatial Data Resources

## Forest Vegetation Mapping

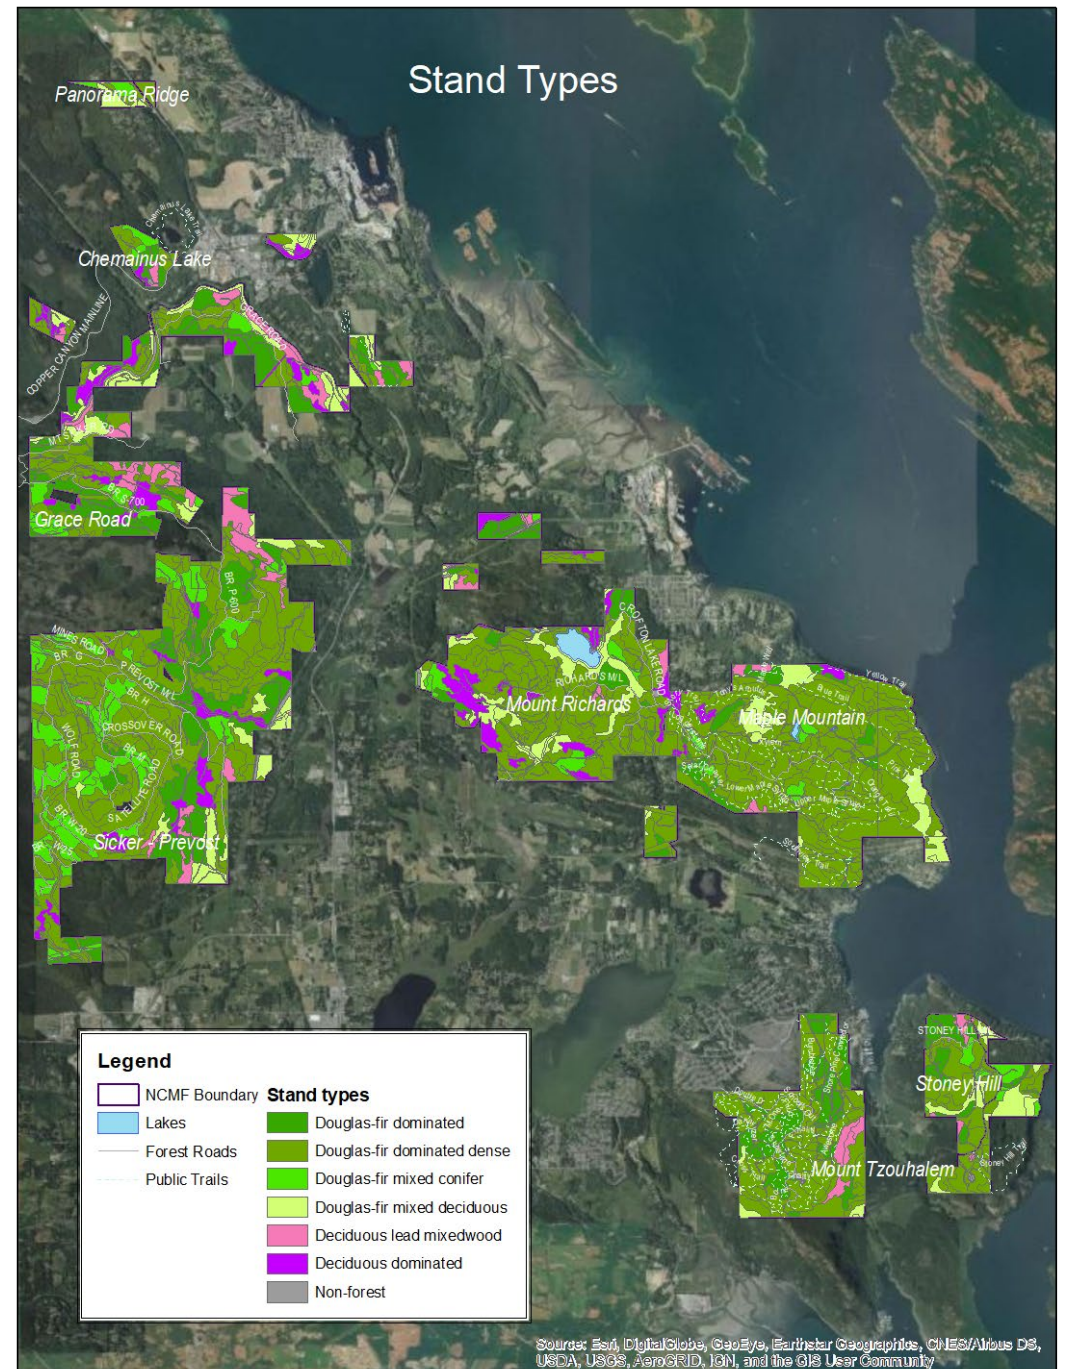

- Methods for verifying forest cover and estimating age
  - High resolution orthophotos
  - Laser-measured canopy height
  - Tree height is a good predictor of age

# Evaluation and Development of Spatial Data Resources

## Forest Vegetation Mapping

- Stand Age Class
- Age correlated with many stand features
  - Harvestable volume
  - Stand structure
  - Biomass and Carbon
  - Biodiversity
- Stand Types (species groups)

# Multi-objective Scenario Analysis

## Modelling Tools

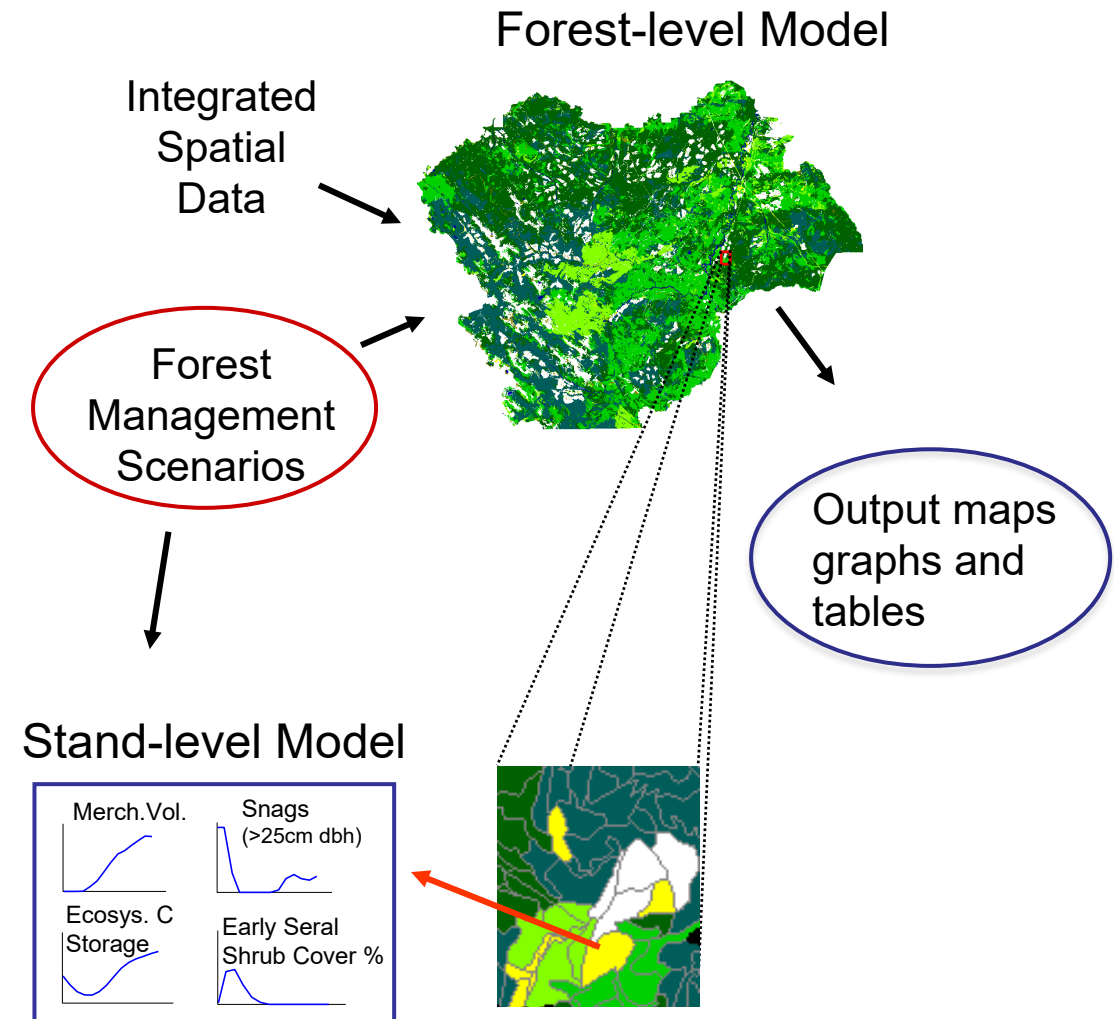

- Spatially explicit forest-level model (Forest Planning Studio -- FPS)
- Stand-level model (FORECAST)

## Scenarios

1. Status Quo
2. Reduced Harvest
3. Active Conservation
4. Passive Conservation

## Output

- Wide variety of descriptive variables at the stand and landscape level
- Used to evaluate impacts of management choices on selected C&I

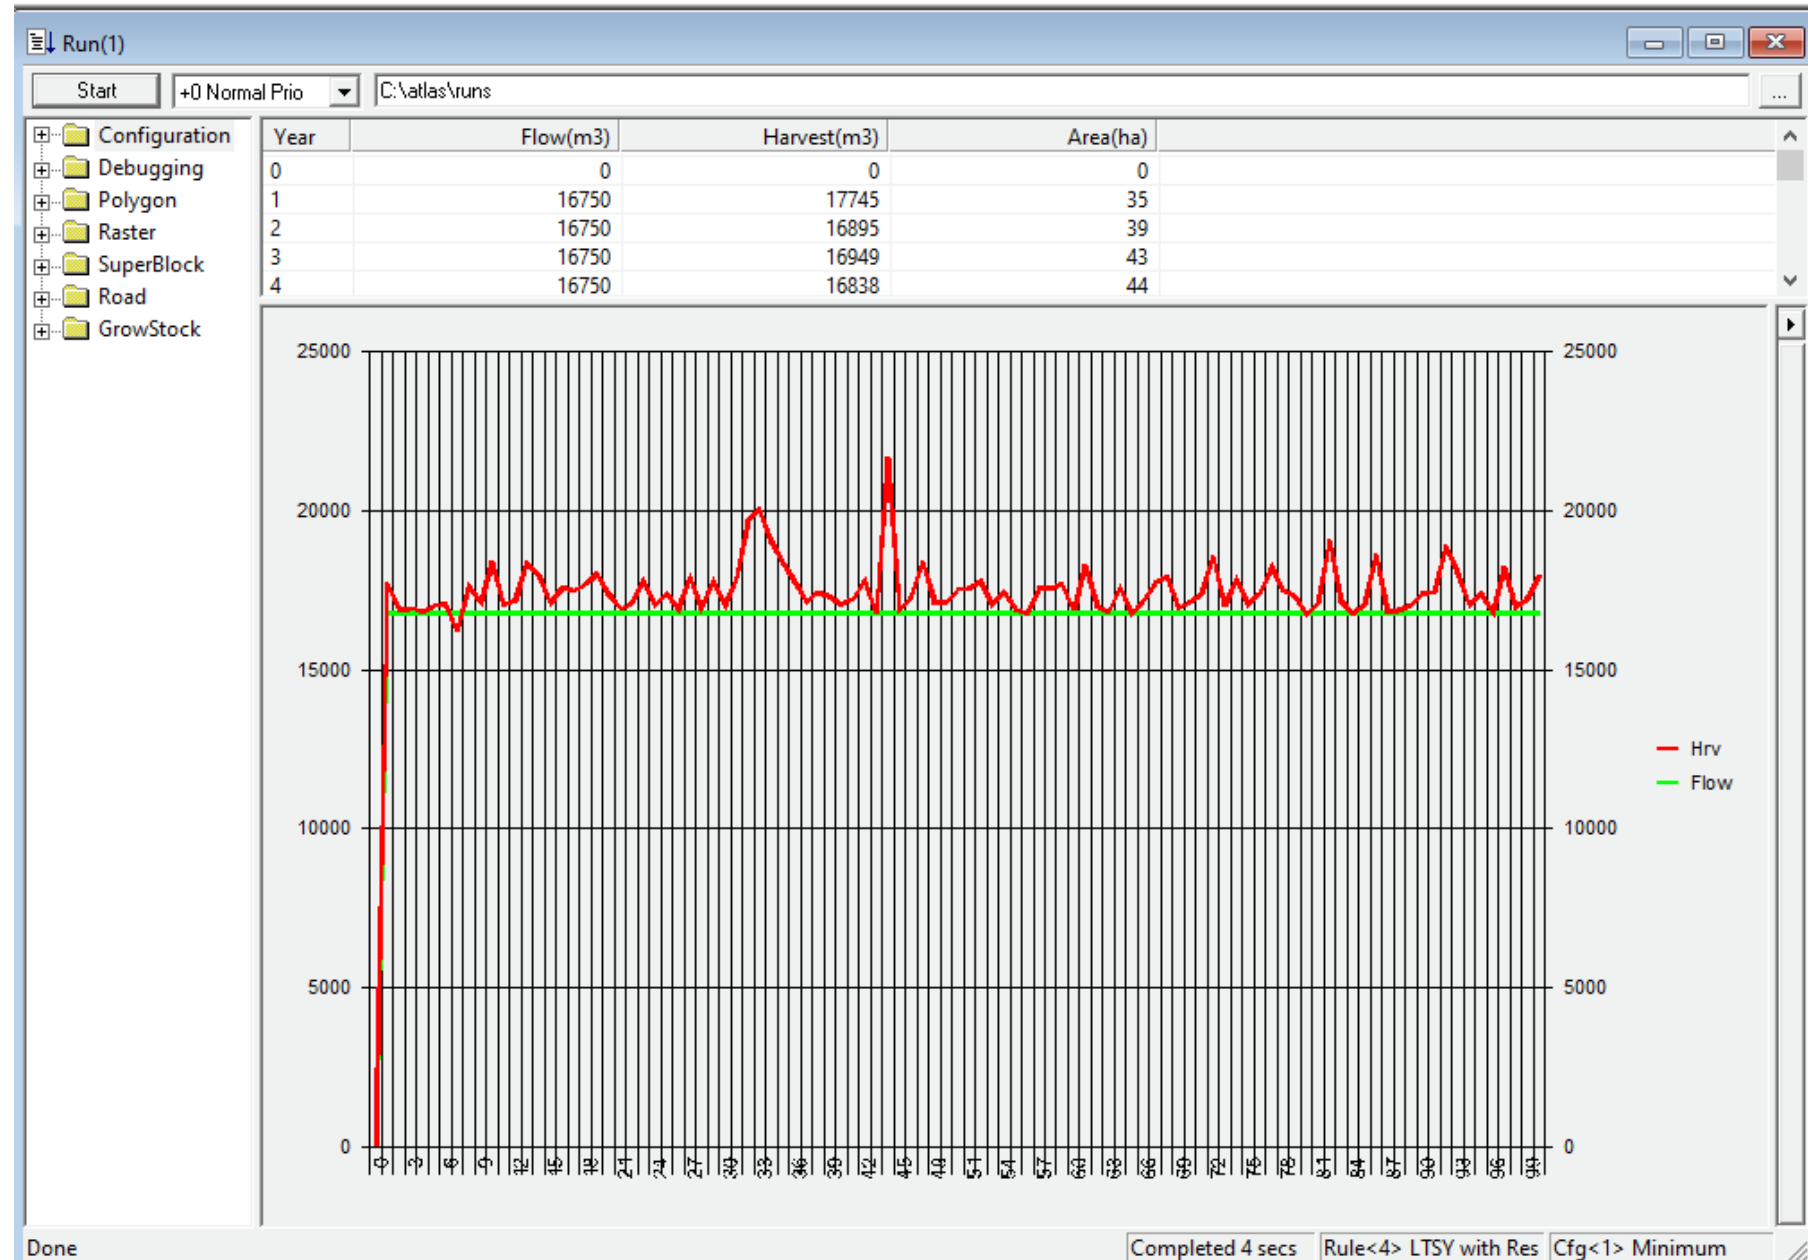

# Scenario Descriptions

	Scenario 1	Scenario 2	Scenario 3	Scenario 4
	Status Quo	Reduced Harvest	Active Conservation	Passive Conservation
FPS Harvest Target (m3/yr)	16,750	6,750	Selected areas	None
Actual Avg Harvest (m3/yr)	17,509	7,421	1300	0
Actual Avg Area Harvest (ha/yr)	43.7	20.3	3.9	0
Preserve Ret(%) (E. Maple Mtn)	100	100	100	100
General THLB Block Retention (%)	15	35	na	na
Selective thinning to promote development of old forest features (% ret)	na	na	65	na
Woodland restoration (% ret)	na	na	45	na
VQO Retention Areas (% actual retention)	55	80	100	100
VQO Partial Retention Areas (% actual retention)	35	50	100	100

# Scenario Simulation: FPS - Scenario 1: Status Quo

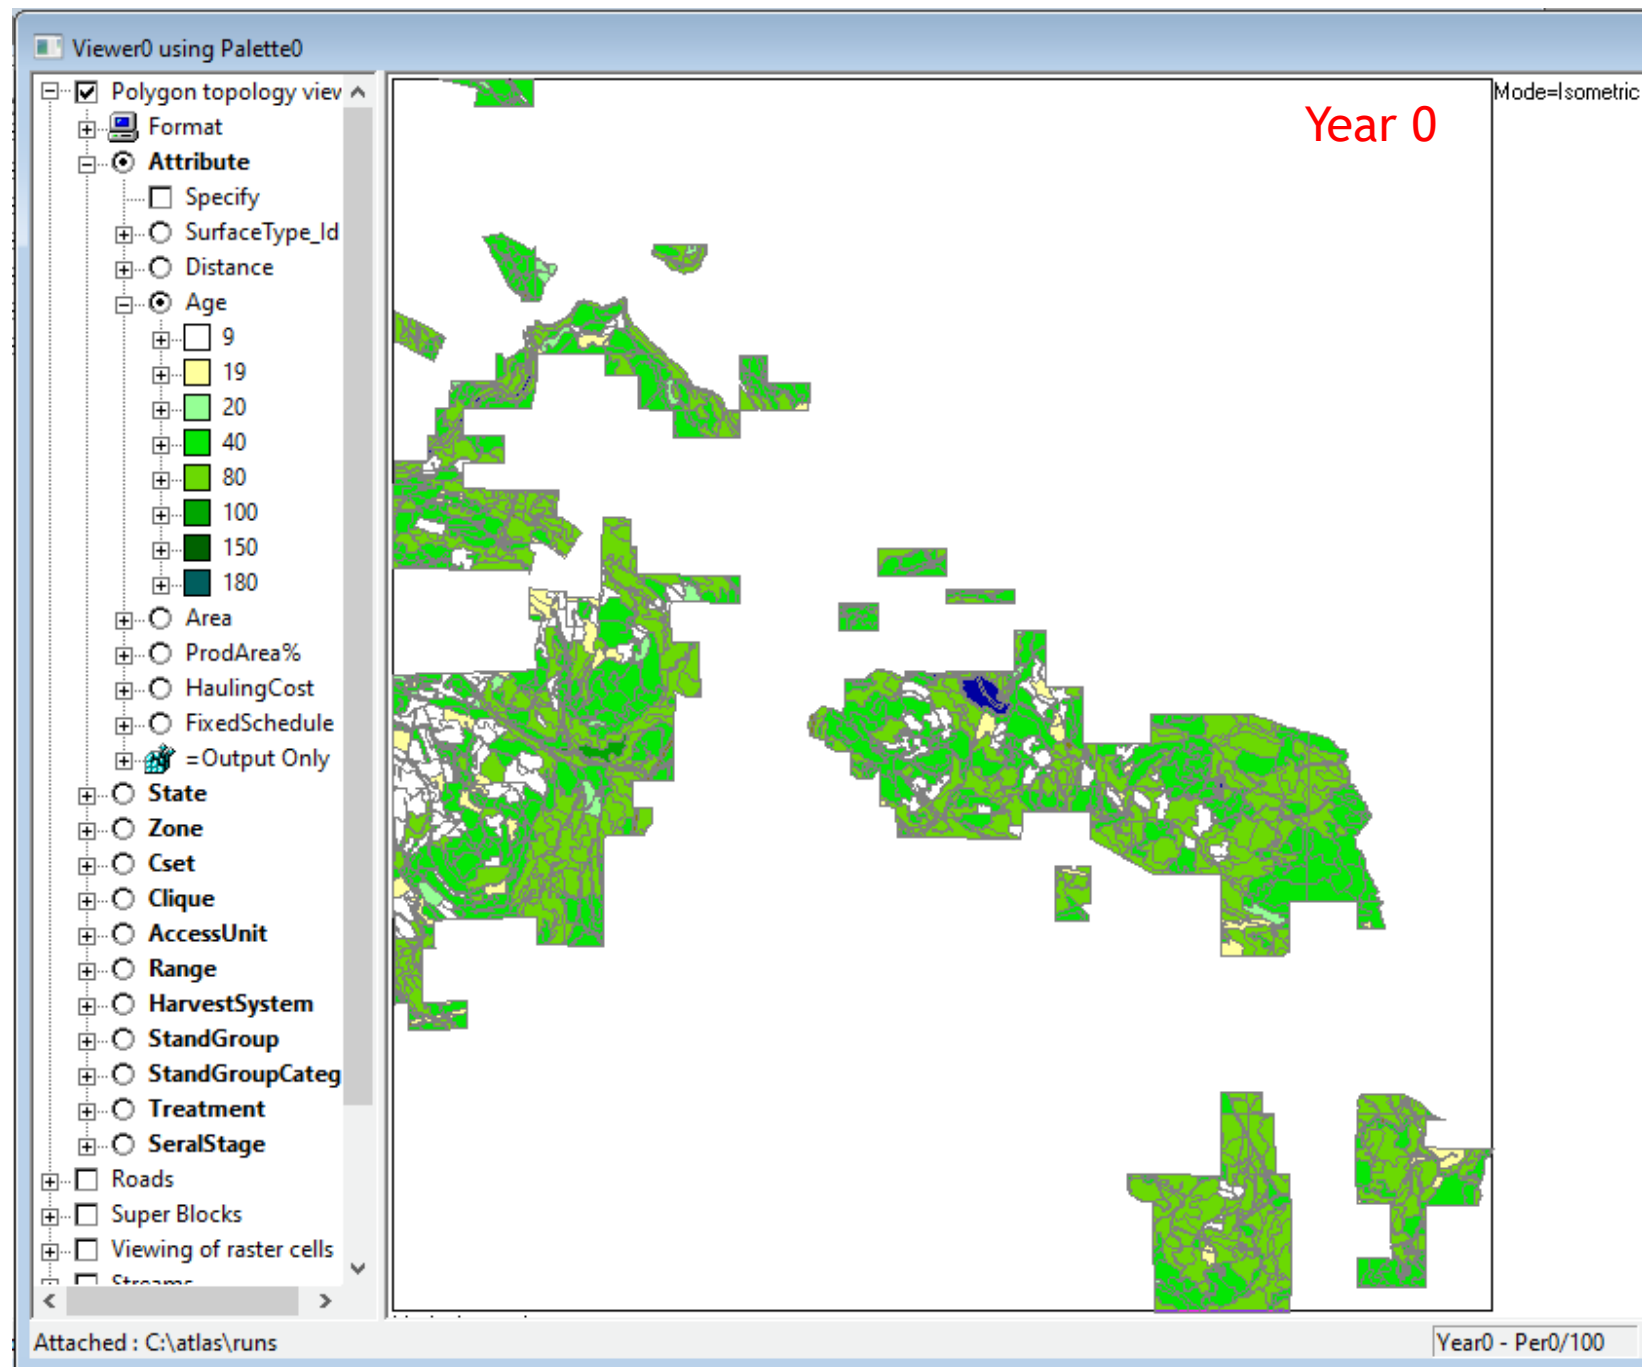

## Key Features:

- 17,500 m<sup>3</sup>/yr flow target
- Sorts eligible stands based on oldest first
- Min 15% in-block retention
- Increased retention in VQO areas
- In-block retention areas tracked separately
- Regenerates as same stand type after harvest
- Standard netdown

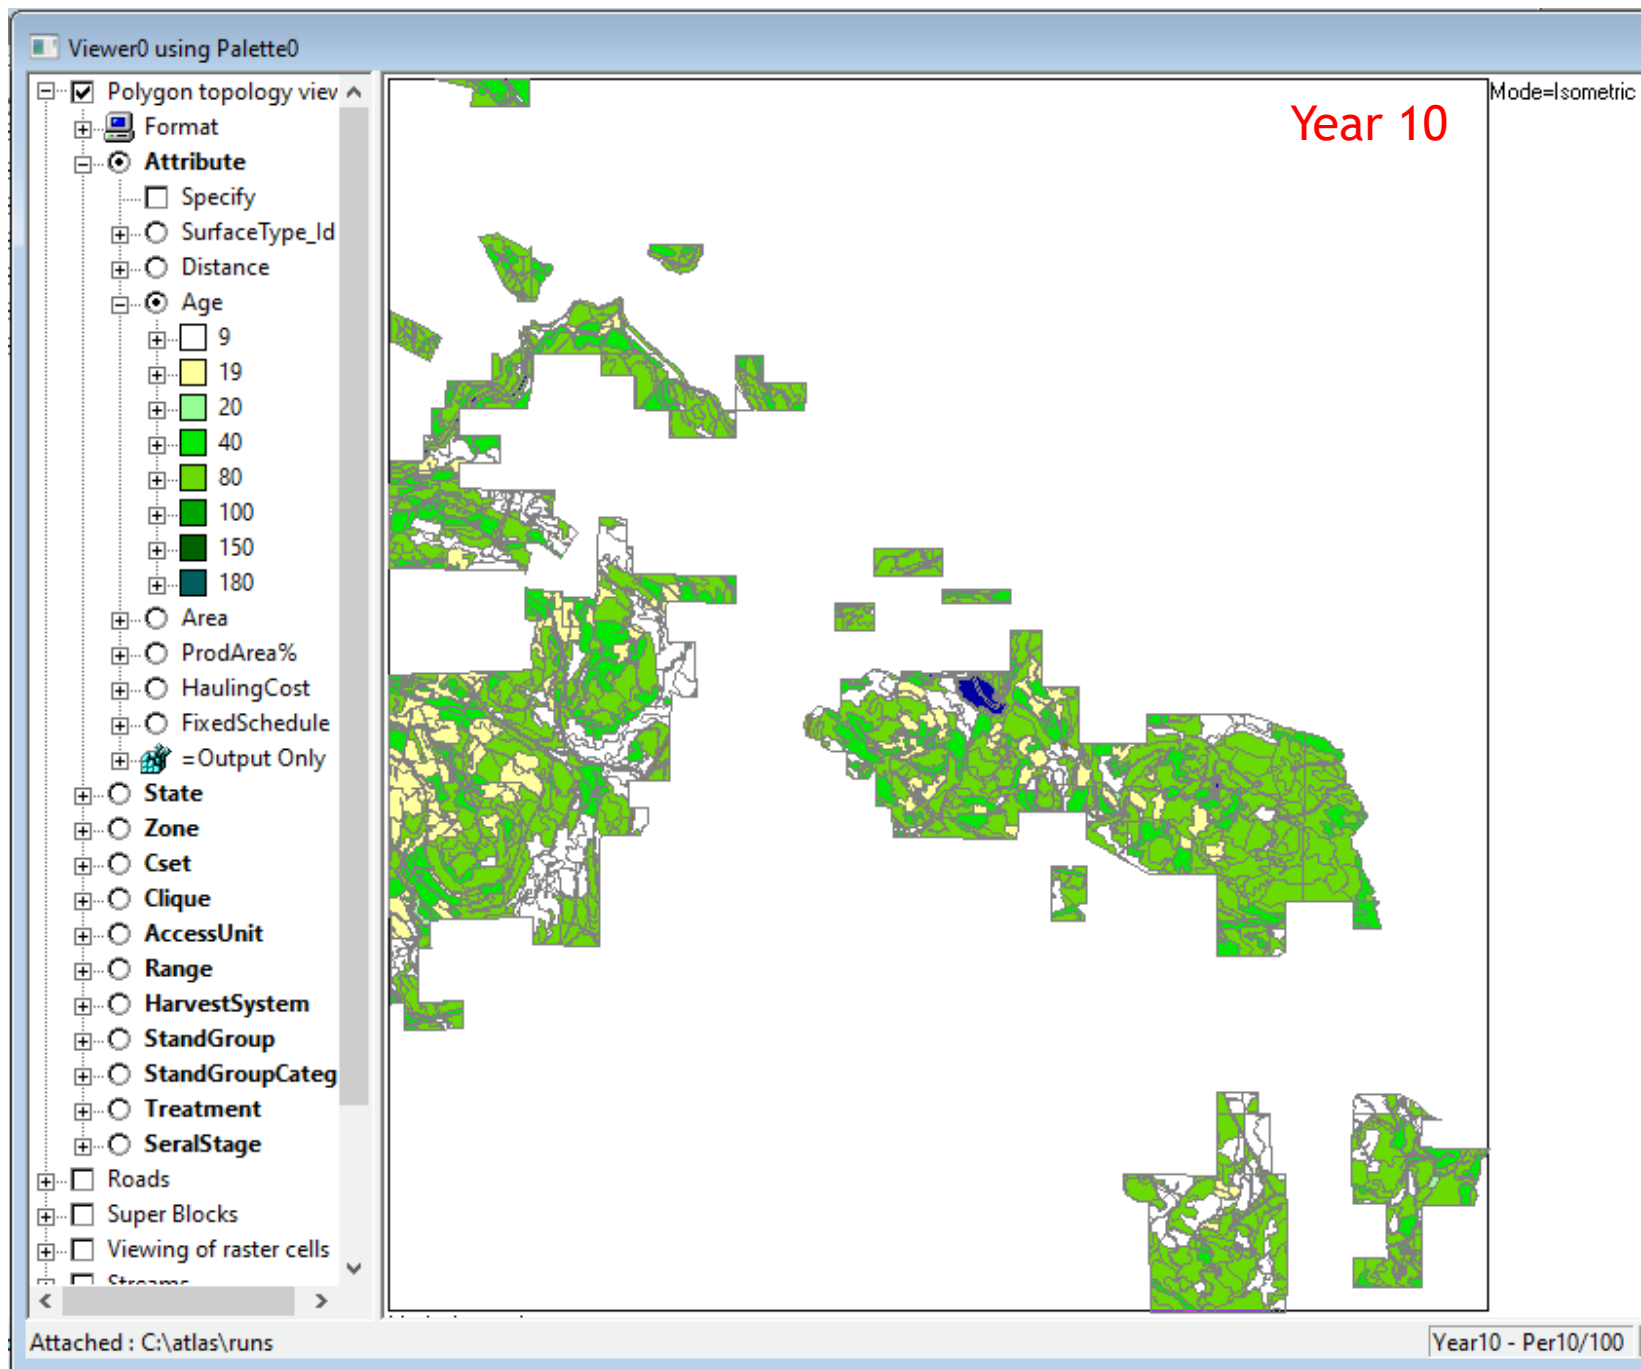

# Scenario Simulation: FPS

# Scenario Simulation: FPS

## Scenario 1: Status Quo

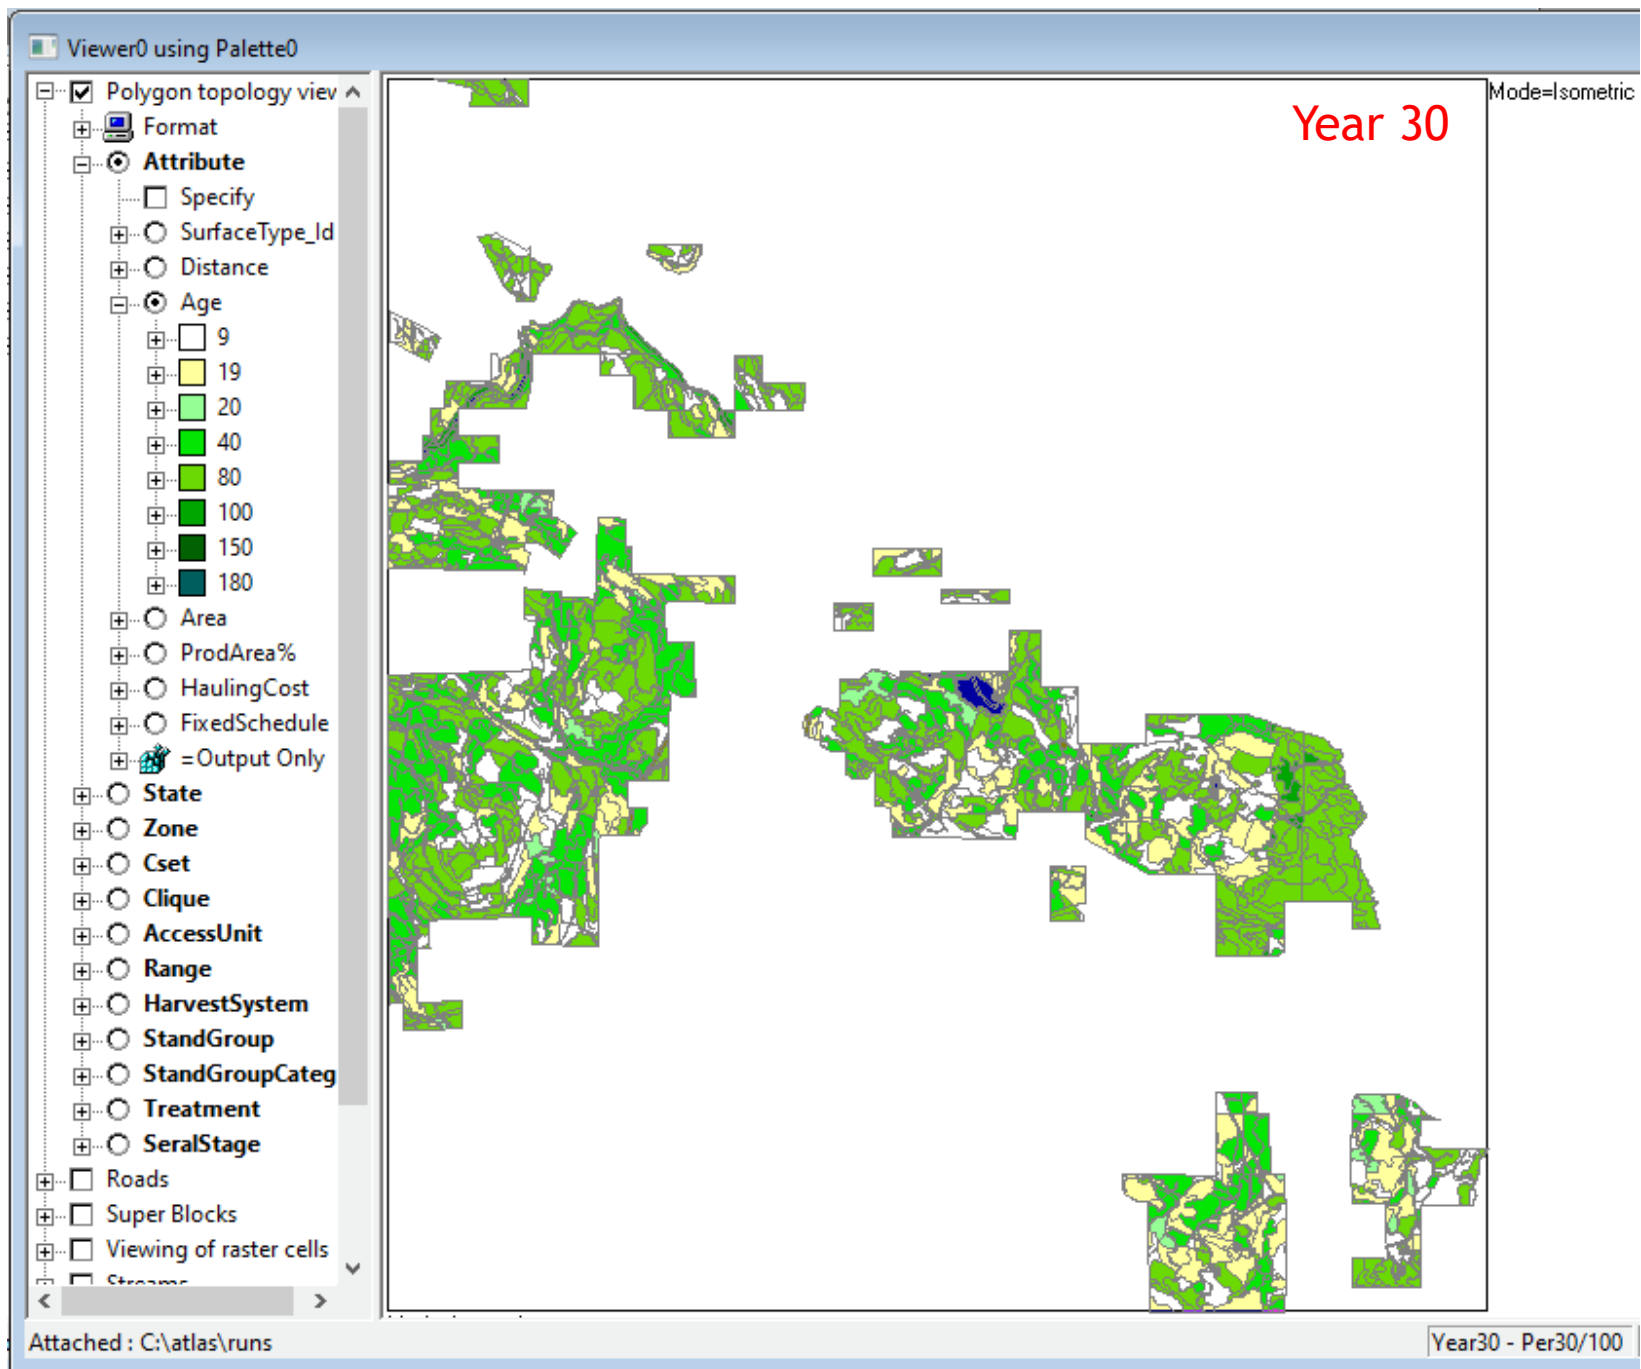

# Scenario Simulation: FPS

## Scenario 1: Status Quo

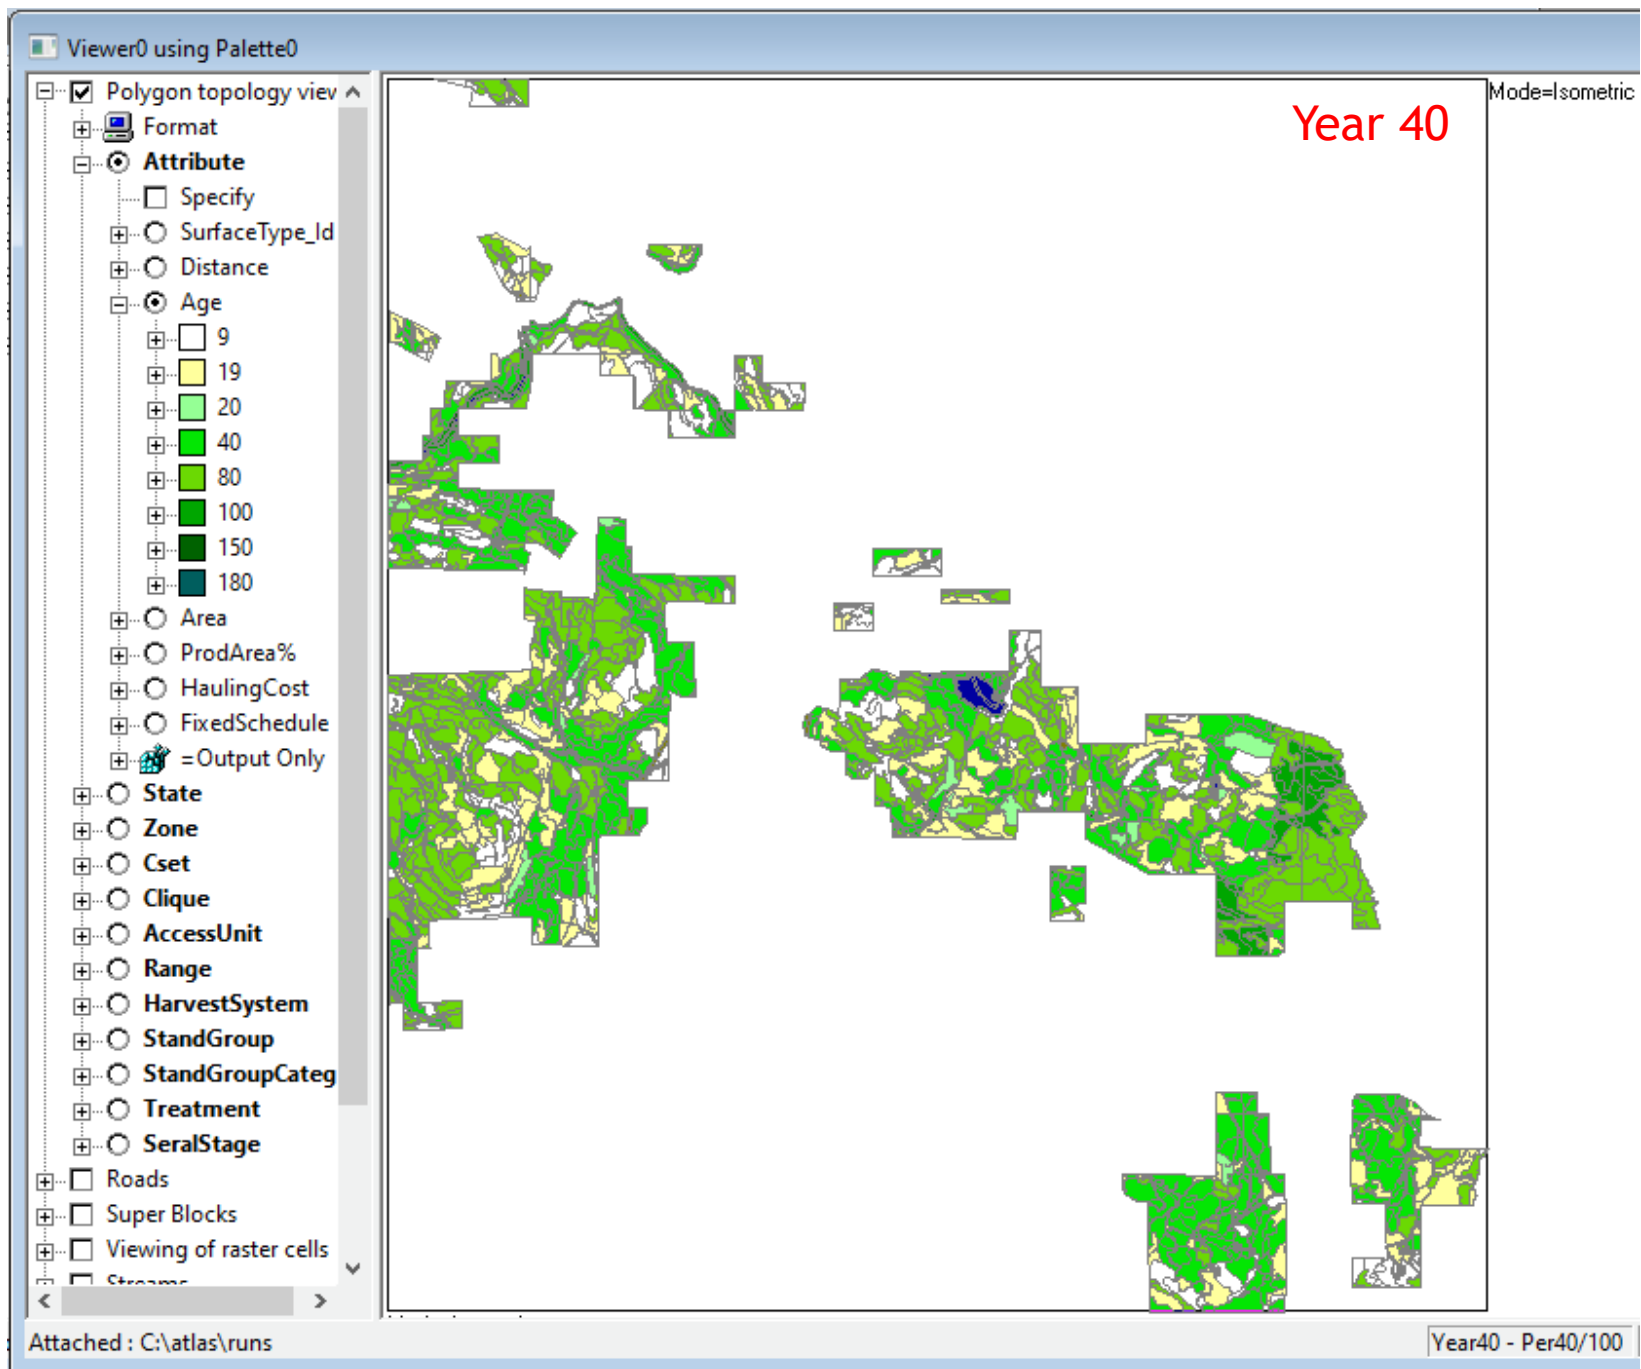

# Scenario Simulation: FPS

## Scenario 1: Status Quo

# Scenario Simulation: FPS - Scenario 2: Rduced Harvest

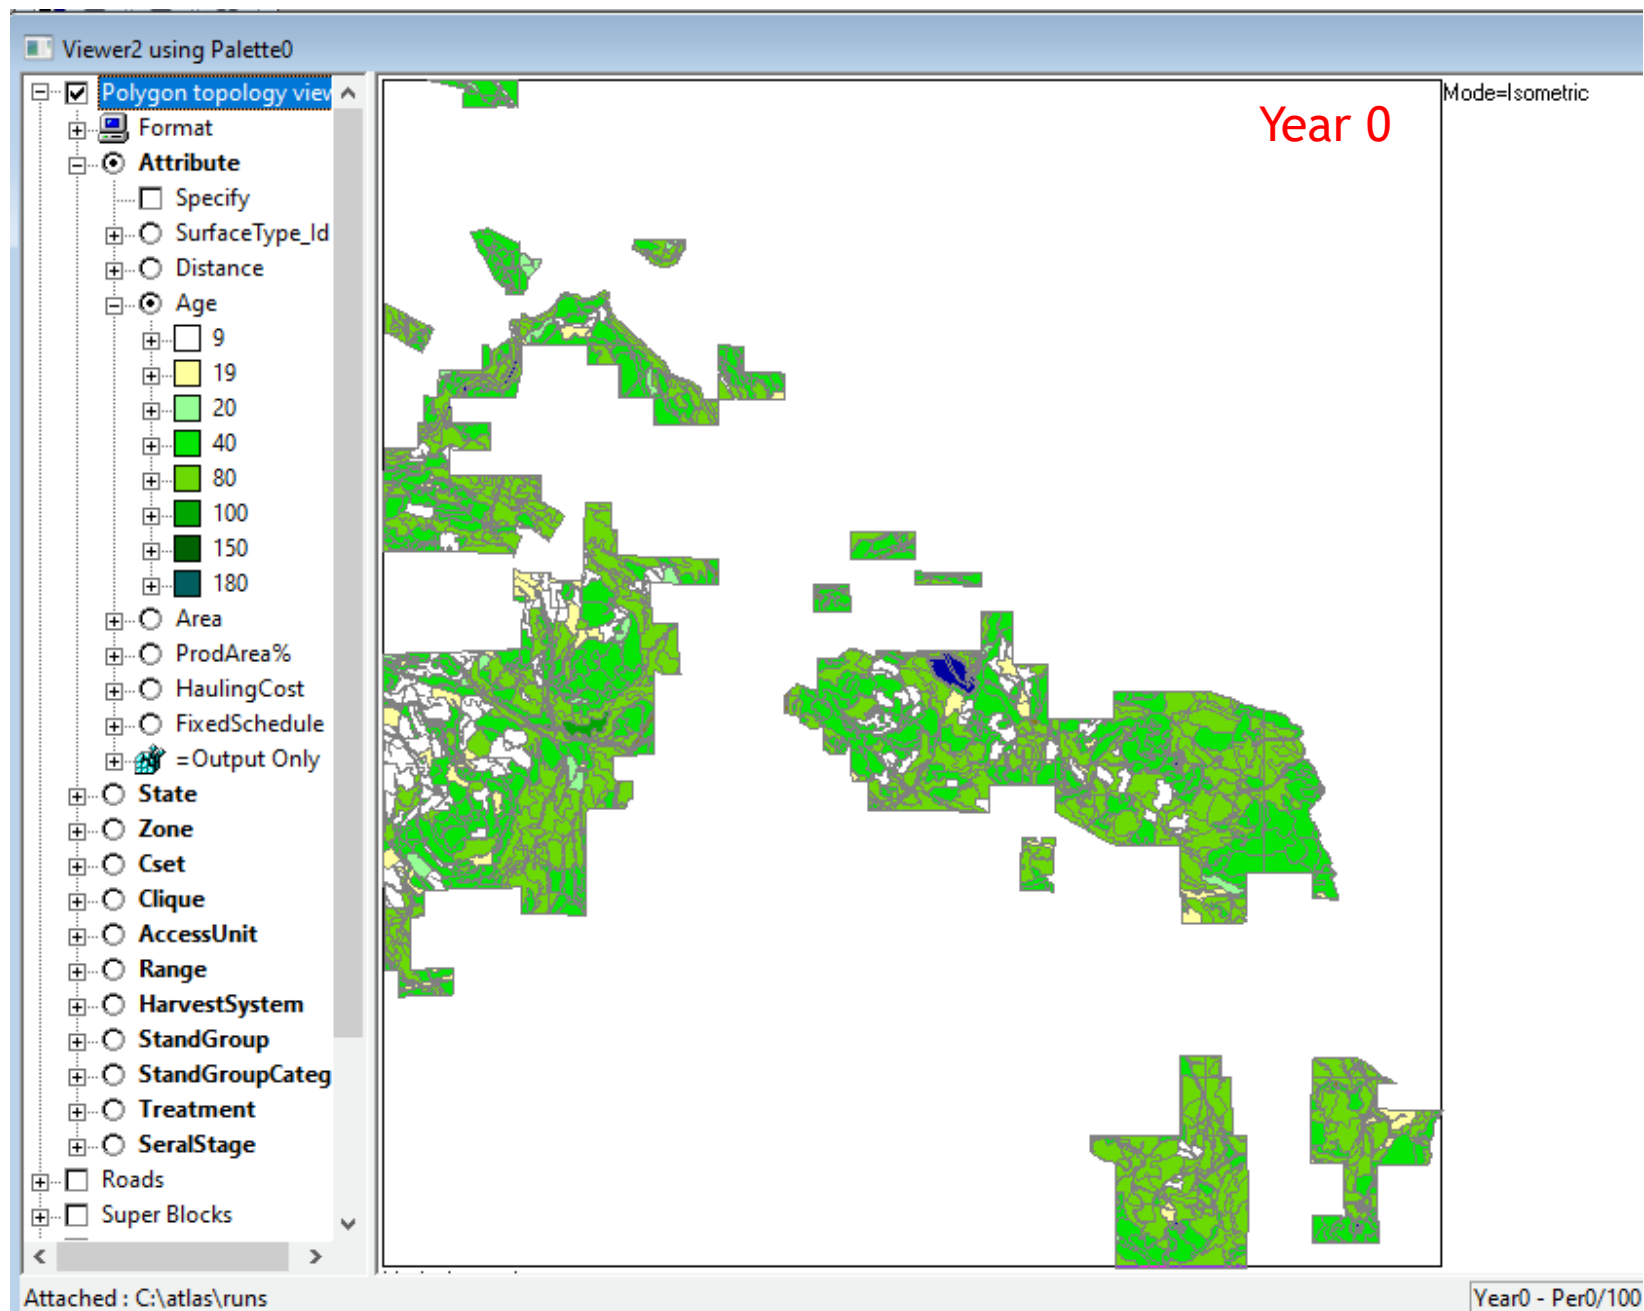

## Key Features:

- 7,400 m<sup>3</sup>/yr flow target (~ 40% of Status Quo)
- Sorts eligible stands randomly
- Small openings / variable retention
- Minimum 35% in-block retention
- Increased harvest costs per unit/m<sup>3</sup>

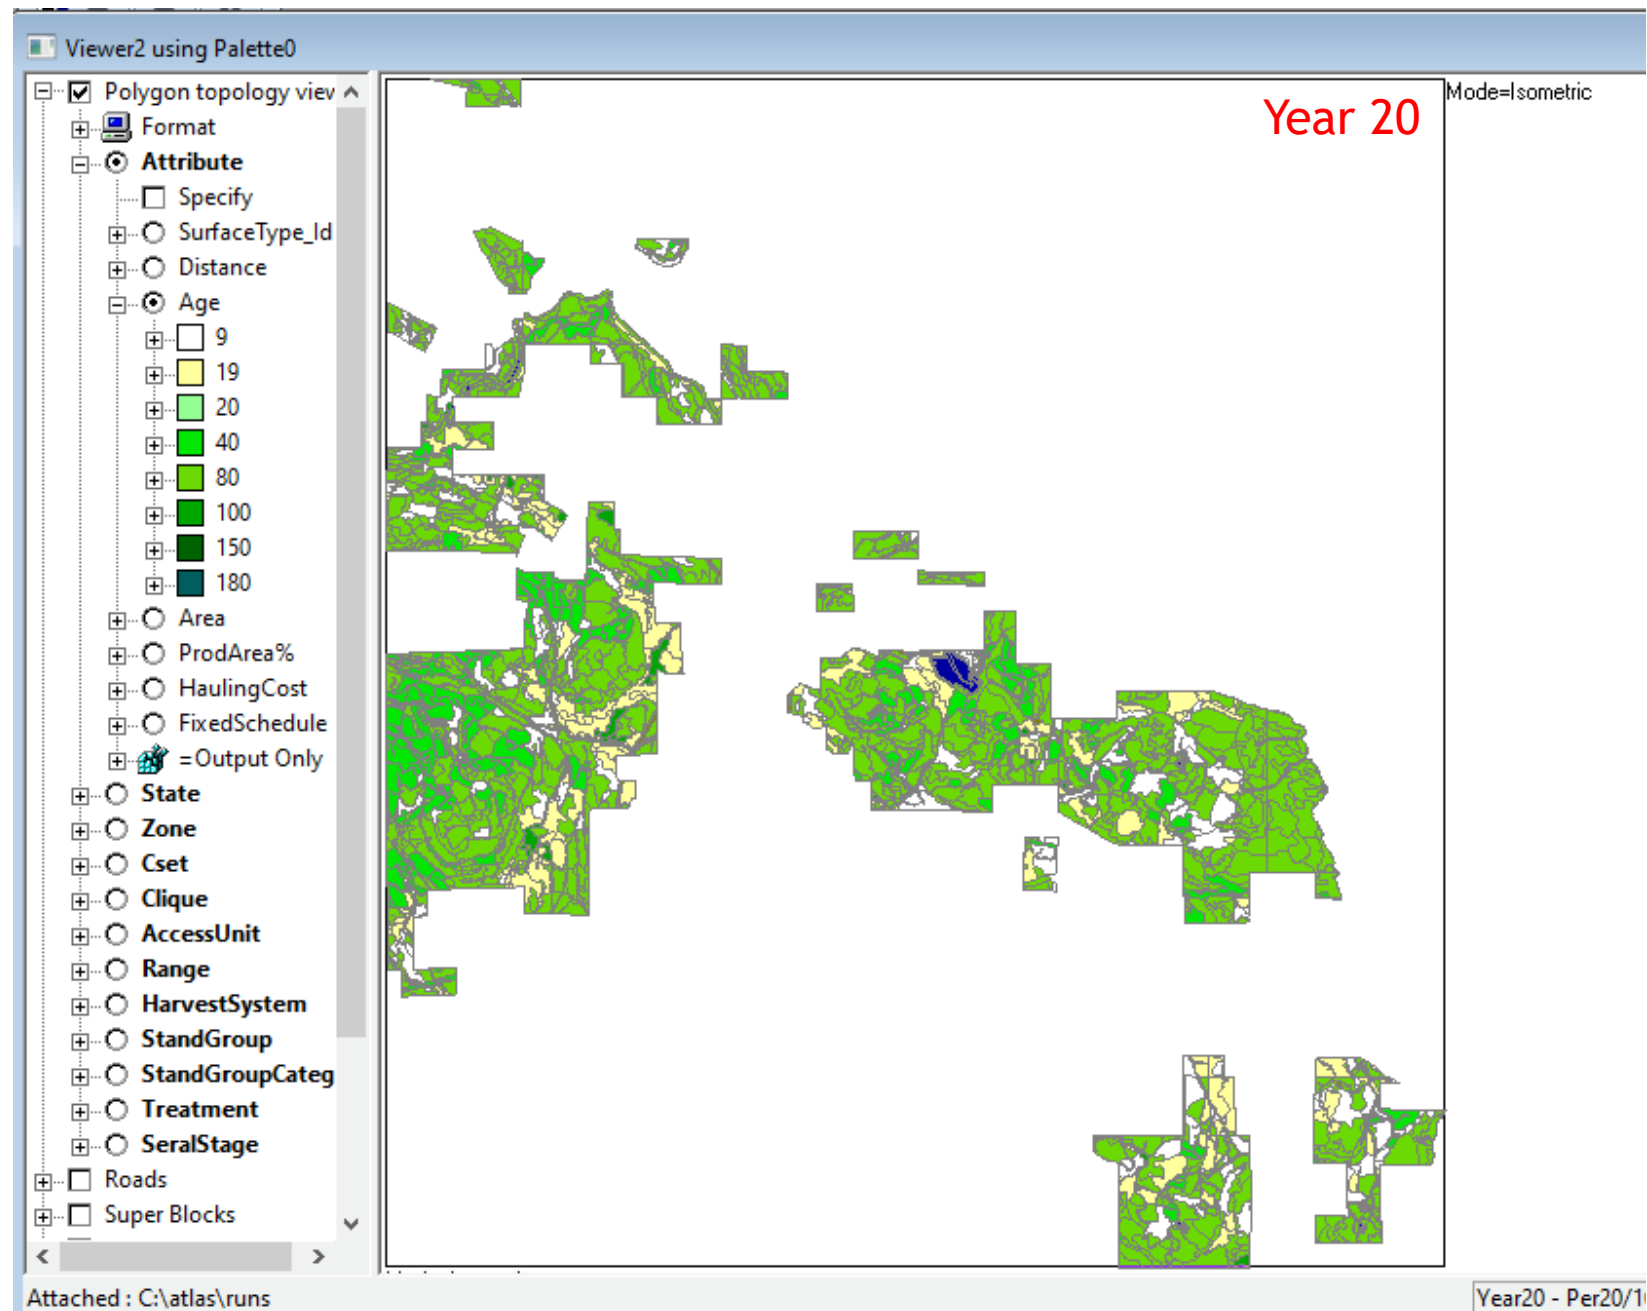

# Scenario Simulation: FPS

## Scenario 2: Reduced Harvest

# Scenario Simulation: FPS

# Scenario Simulation: FPS

## Scenario 2: Reduced Harvest

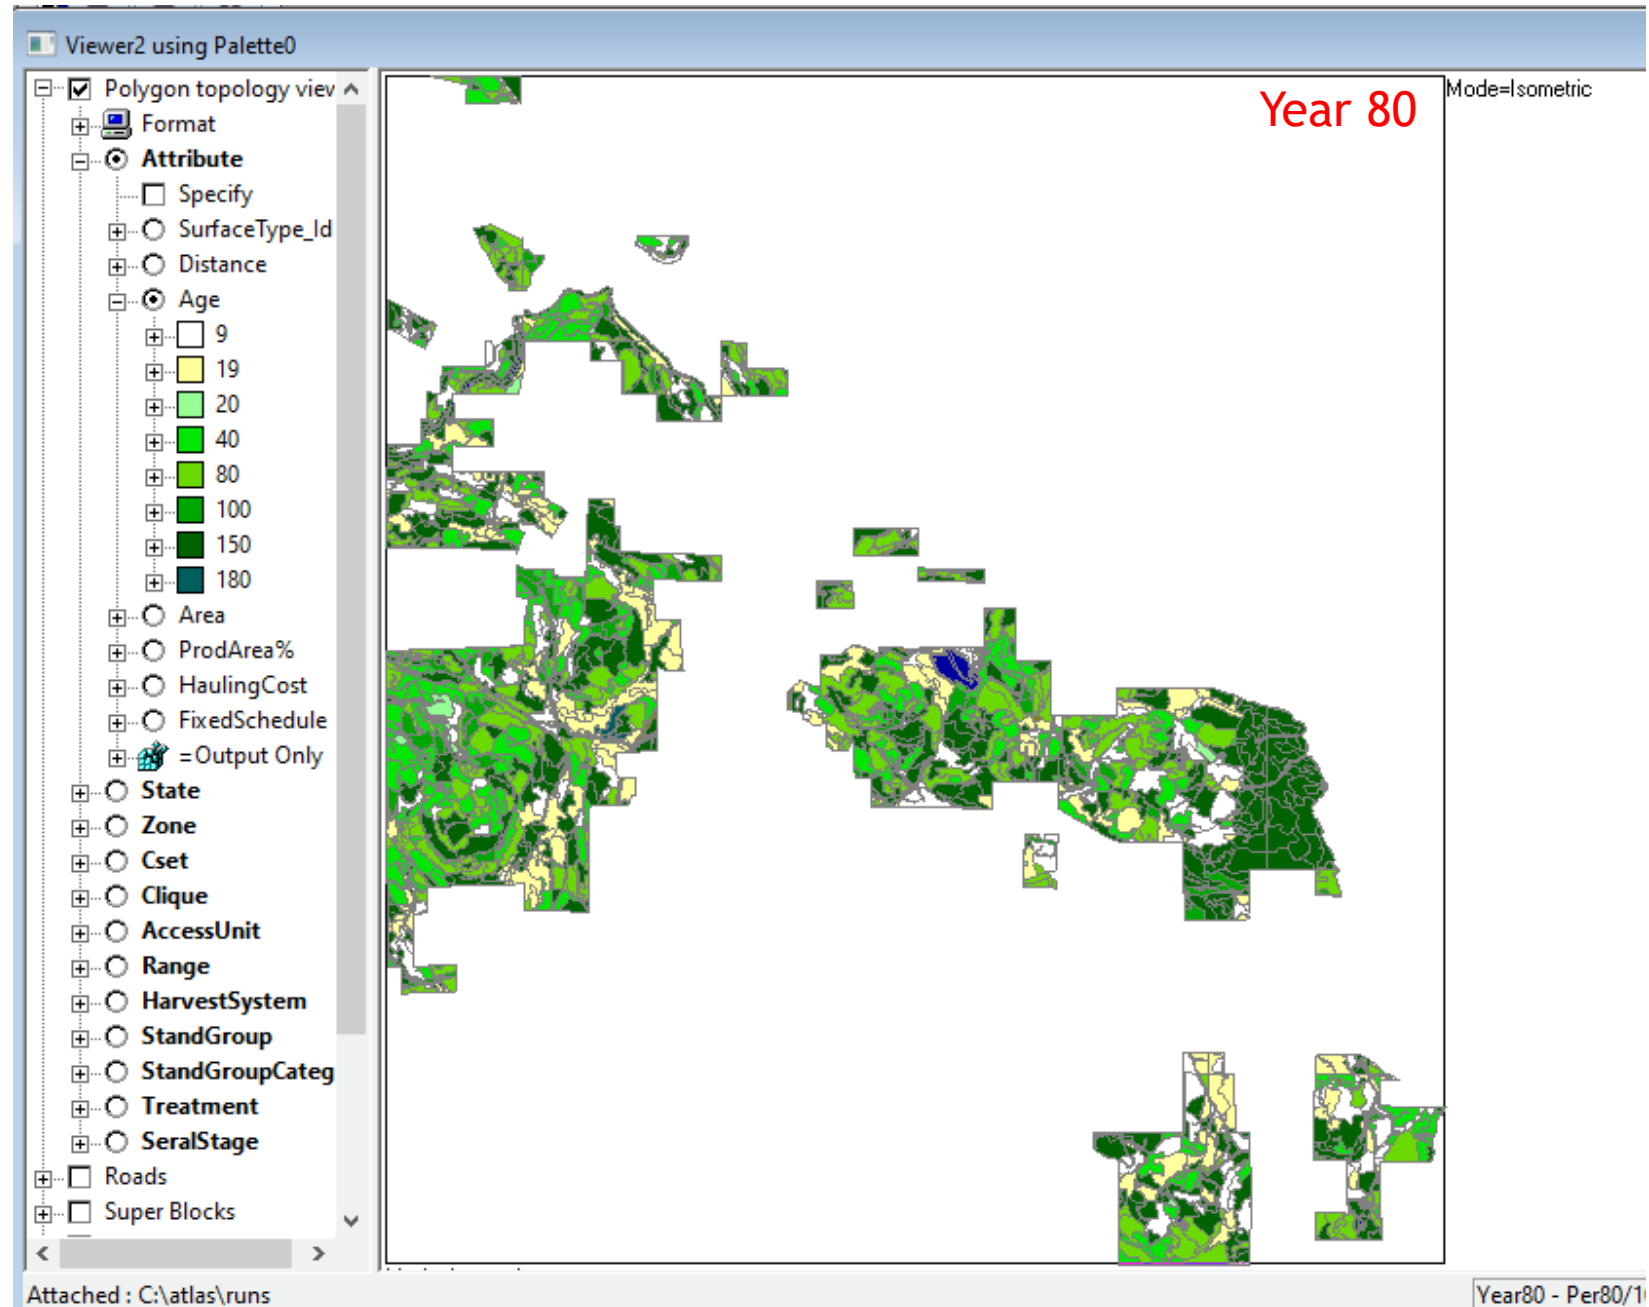

# Scenario Simulation: FPS

## Scenario 2: Reduced Harvest

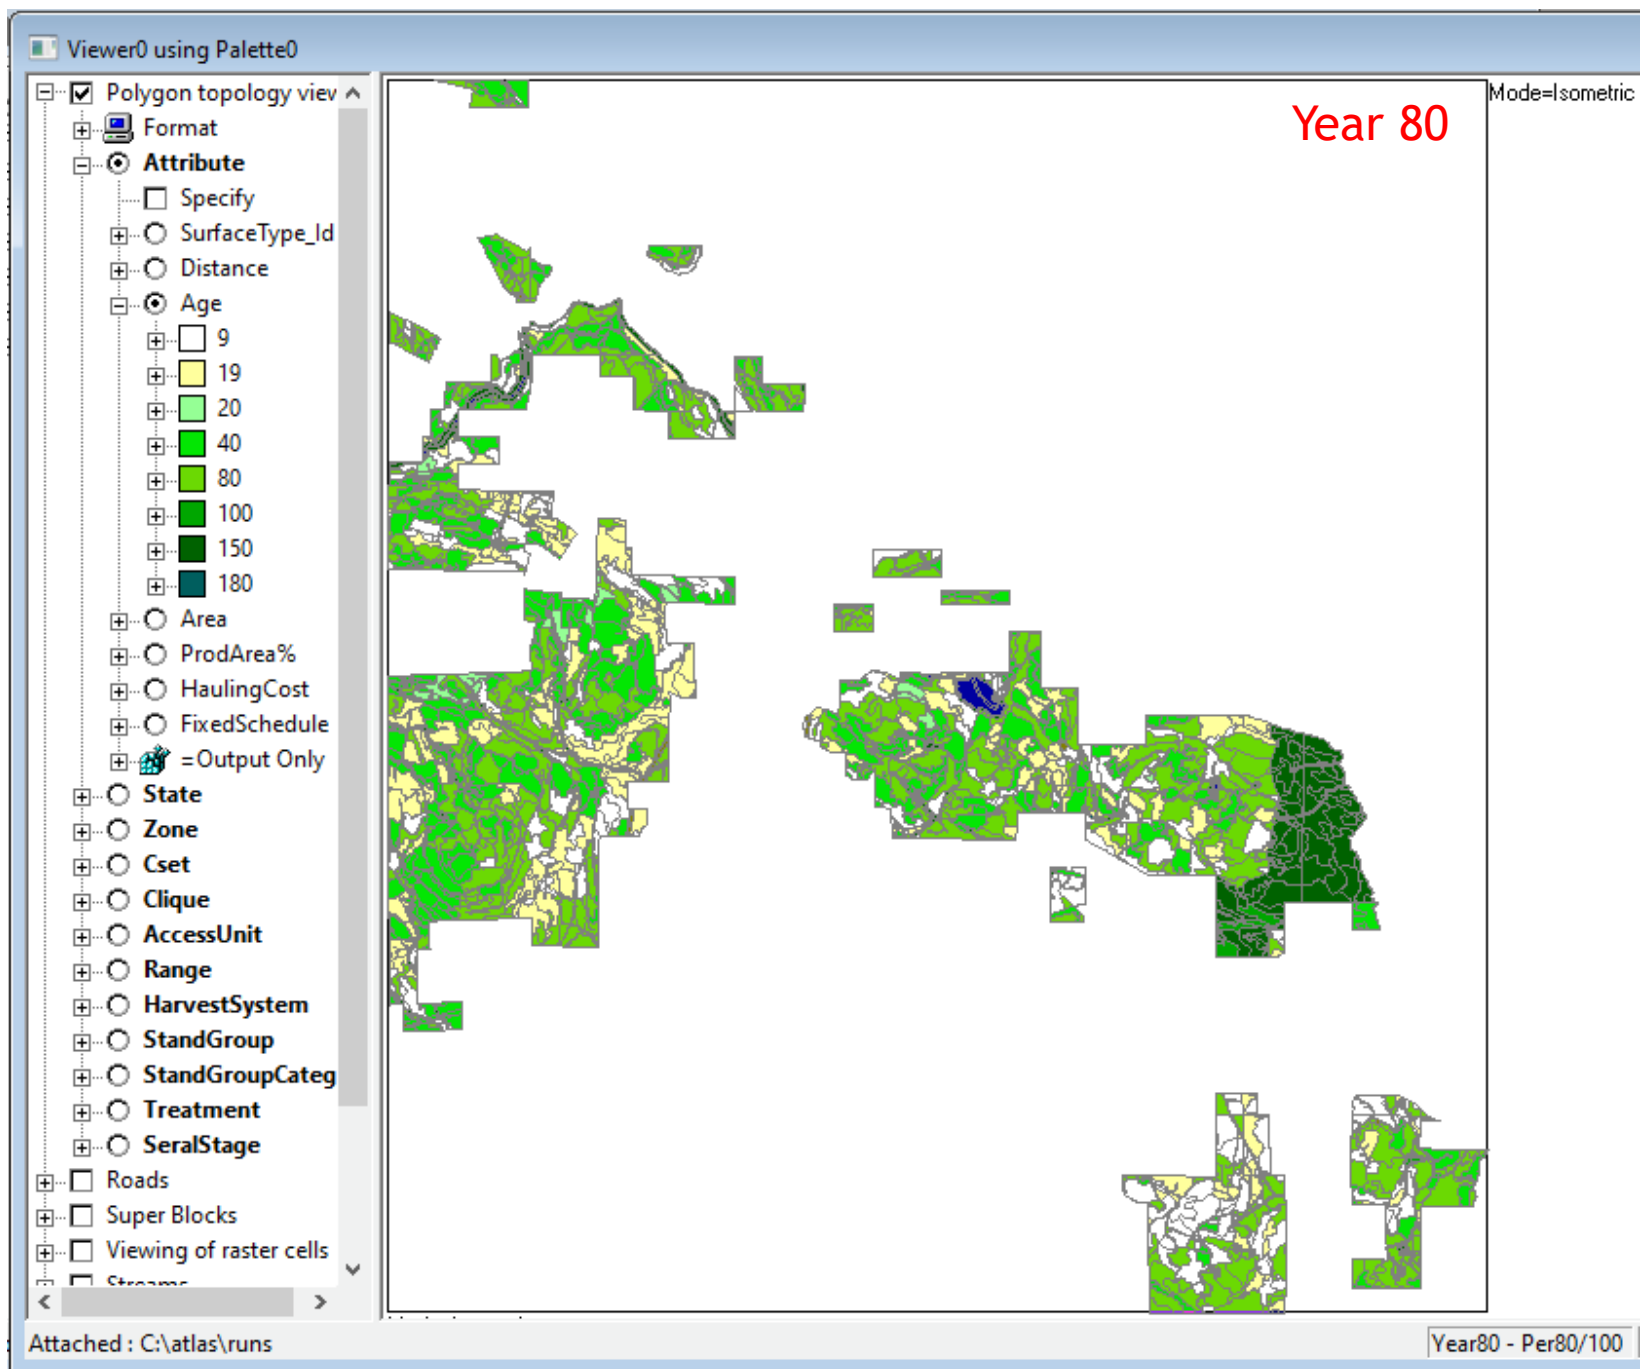

# Scenario Simulation: FPS

## Scenario 1: Status Quo

# Scenario Simulation: FPS - Scenario 3: Active Conservation

## Key Features:

- Remove conifers from selected woodlands areas
- Thinning dense 40-60 yr old Fd stands to promote development of old stand features
- Increased harvest costs per unit/m<sup>3</sup>
- Reduced value of harvested volume relative to Scenarios 1&2
- Roughly 4ha treated per yr for first 30 years
- ~ 1,300 m<sup>3</sup> per yr harvested for first 30 years then 0

# Scenario Simulation: FPS - Scenario 4: Passive Conservation

## Key Features:

- Only fire smart activity included
- Only harvest would be related to windthrow or other disturbance where safety is an issue

# Evaluating Outcomes of Scenarios

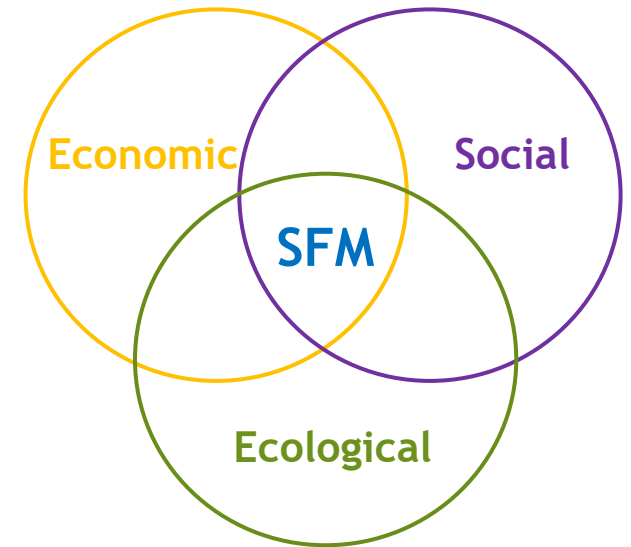

## Criteria and Indicators

- **Criteria** used to define specific services and values associated with forest resource
- **Indicators** used to evaluate degree to which specific criteria have been achieved

## Notes

- Developed with input from public engagement
- Evaluated using model output and past experience

## Sustainable Forest Management (SFM)

# Evaluating Outcomes of Scenarios

## Economic Indicators

Criterion	Indicator
2.1 Timber Revenue	2.1.1 Total annual harvested volume (m3)
	2.1.2 Estimated net revenue after accounting for expenses (\$)
2.2 Carbon Revenue	2.2.1 Estimated annual revenue from C credit sales (\$)
2.3 Recreation Revenue	2.3.1 Estimated annual revenue from recreation (\$) - <b>Not able to distinguish among scenarios</b>

# Evaluating Outcomes of Scenarios

## Ecological Indicators

Criterion	Indicator
1.1 Sensitive Ecosystems	1.1.1 Area of sensitive ecosystems (SEI) impacted by harvest (ha or %)
1.2 Protection/Enhancement of Mature & Old Forest and Associated Bird Habitat	1.2.1 Recruitment of old forest (ha) 1.2.2 Quantification of bird habitat by species or groups (ha)
1.3 Ecosystem Carbon Storage / Emissions	1.3.1 Total ecosystem C storage within the Municipal Forest (MT C) 1.3.2 Quantification of net CO2 emissions (reductions) associated with forest management (t CO2e)
1.4 Water Services	1.4.1 Total disturbed area in key watersheds (ha or %)
1.5 Regional Habitat Connectivity	1.5.1 Mature forest habitat connectivity analysis incorporating adjacent forest areas (calculated index)

# Evaluating Outcomes of Scenarios

## Social Indicators

Criterion	Indicator
3.1 Visual Quality	3.1.1 Degree to which visual quality objectives are met (%)
3.2 Wilderness Recreation	3.2.1 Disturbed area surrounding (200m buffer) sanctioned trail network (%)
3.3 Trail Access	3.3.1 Not able to distinguish among scenarios
3.4 Fire Risk	3.4.1 Area with different fire risk rankings (%)

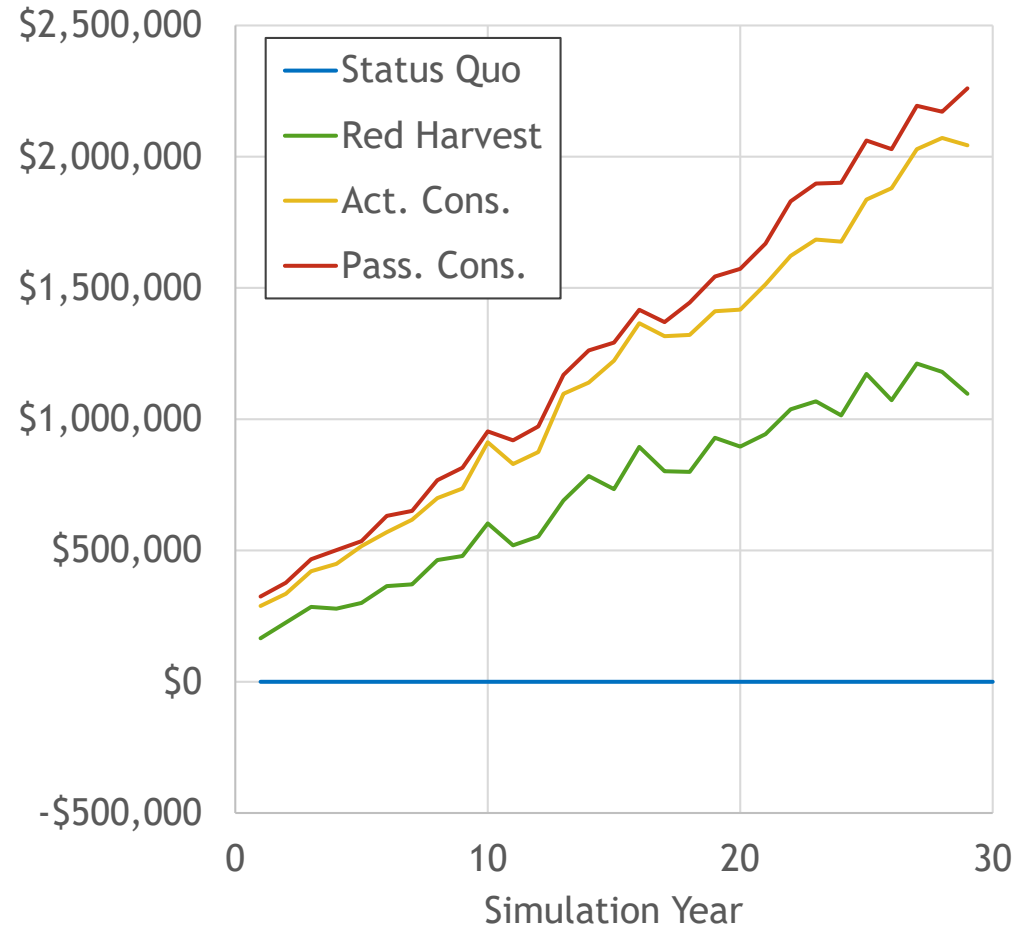

# Evaluating Outcomes of Scenarios: Results

## Economic Indicators: Timber vs. Carbon Revenue

Net Revenue from Timber Harvest

Net Revenue from Carbon Credits

# Evaluating Outcomes of Scenarios: Results

## Economic Indicators: Timber vs. Carbon Revenue

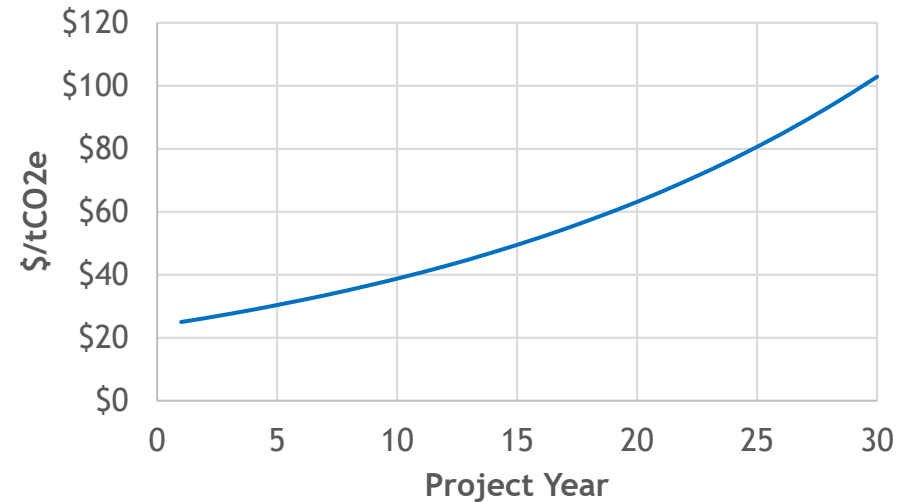

### Timber assumptions

Scenario	Cost \$/m3	Price \$/m3	Net \$/m3
1	\$44	\$90	\$46
2	\$60	\$90	\$30
3	\$80	\$56	-\$24
4	\$0	\$0	\$0

- Assumes 2% increase in net timber value per year

### Carbon assumptions

Estimated Carbon price \$/tCO2e

- Assumes 5% annual increase in carbon price
- Includes startup cost of \$175,000
- Annual maintenance of \$20,000

# Evaluating Outcomes of Scenarios: Results

## Ecological Indicators:

### Sensitive Ecosystem Areas Impacted by harvest (1.1.1)

Scenario	SEI Area with nearby harvest (ha)*
Status Quo	399.5
Reduced Harvest	152.5
Active Conseravation	0.0
Passive Conservation	0.0

\* Any polygon with  $\geq 25\%$  SEI

### Disturbed Area in key watersheds\* (1.5.1)

Scenario	Average hydrologically disturbed (ha)**
Status Quo	333.8 (15%)
Reduced Harvest	171.8 (8%)
Active Conseravation	11.0 (1%)
Passive Conservation	0.0 (0%)

\* Based on average disturbed area (Includes Chemainus and Bonsall)

\*\* Assumes it takes 30yrs to recover hydrologically following harvest

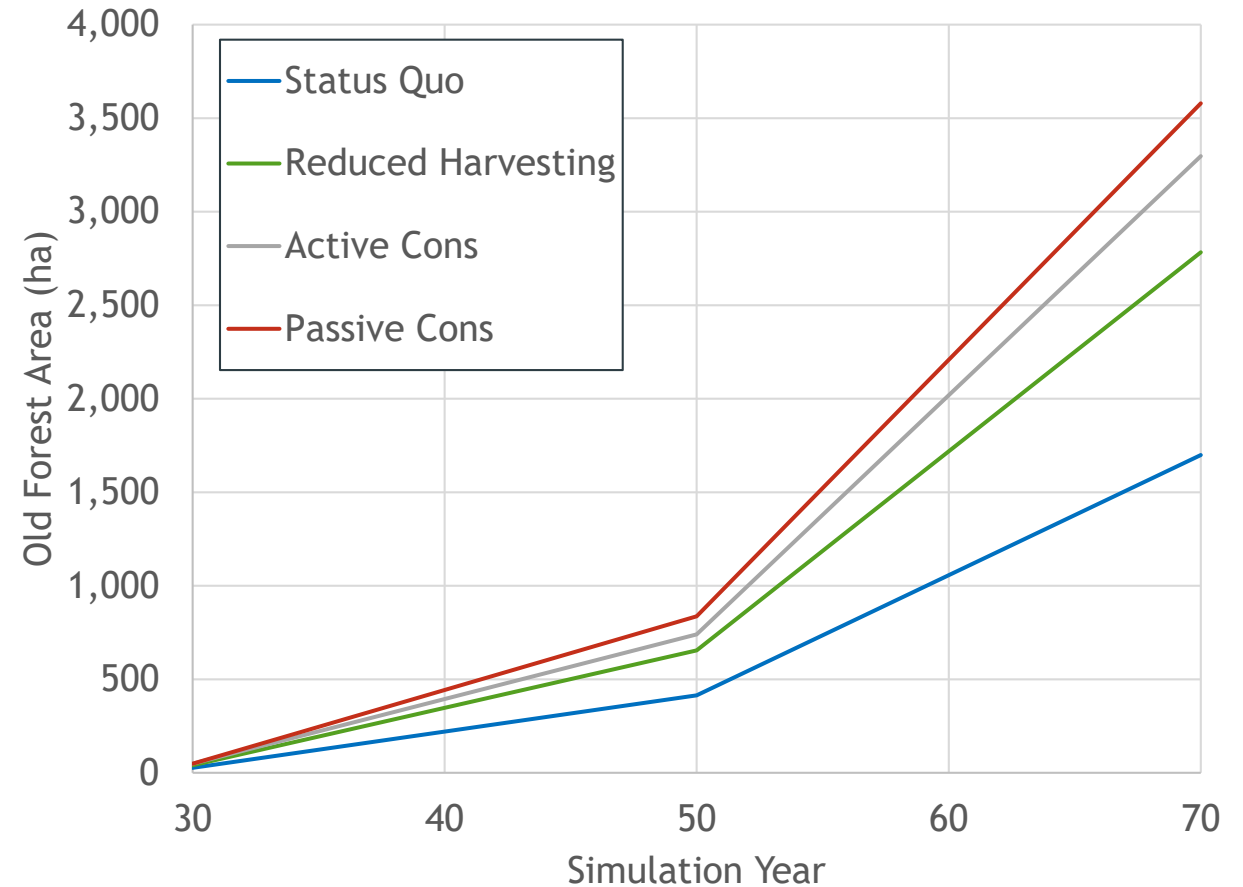

# Evaluating Outcomes of Scenarios: Results

## Ecological Indicators:

### Recruitment of old forest (1.2.1)

Scenario	Rate of increase in forest > 100yr (ha/yr)*
Status Quo	42
Reduced Harvest	69
Active Conseravation	81
Passive Conservation	88

\* From year 30 to 70

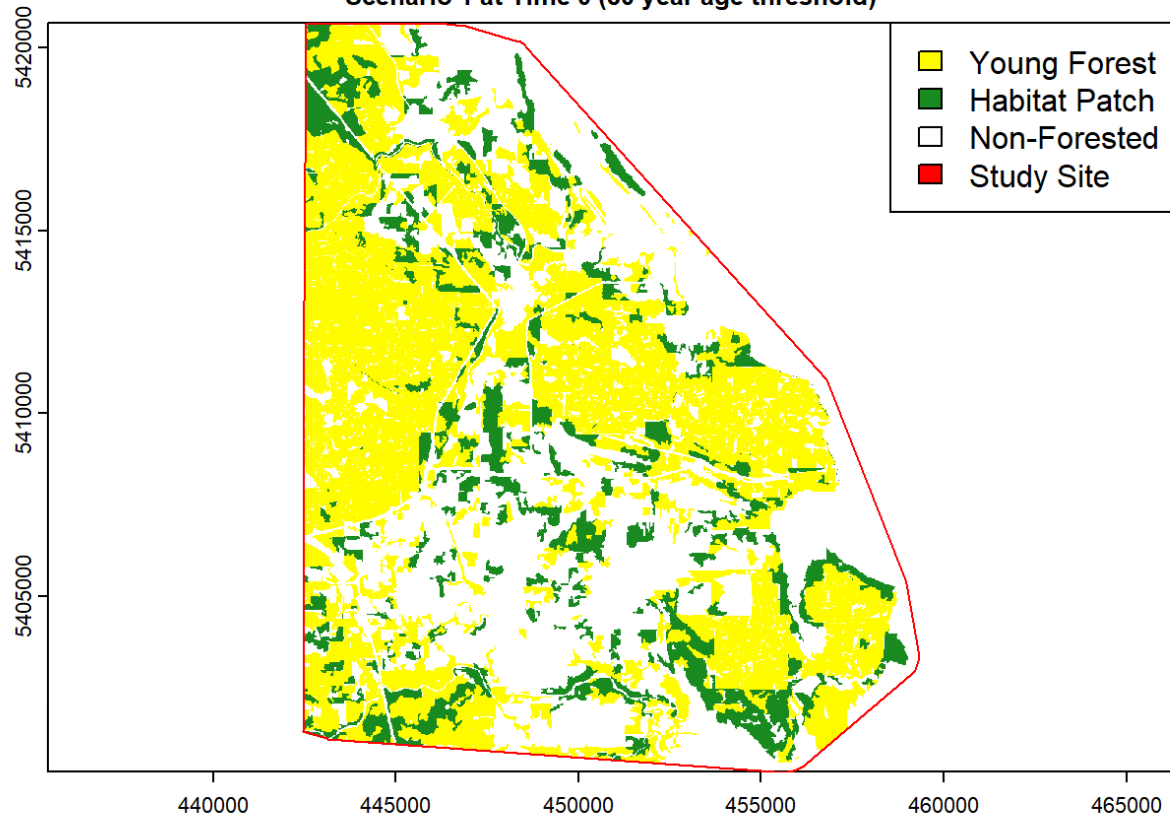

# Evaluating Outcomes of Scenarios: Results

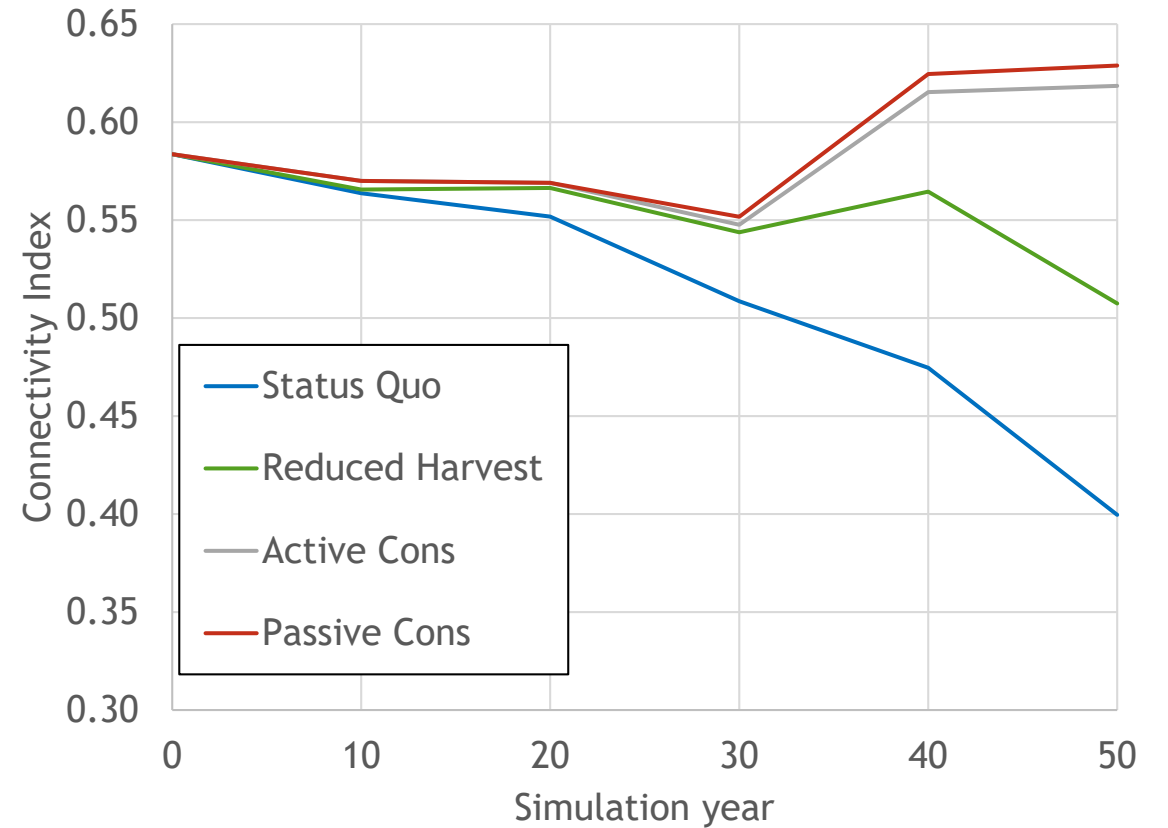

## Ecological Indicators:

### Habitat Connectivity of Mature Forest (> 80yrs) (1.5.1)

Scenario 1 at Time 0 (80 year age threshold)

Mature Forest Connectivity in NC Region

# Evaluating Outcomes of Scenarios: Results

## Ecological Indicators:

Habitat Connectivity of Mature Forest (> 80yrs) (1.6.1)

S1, 0 years

S4, 0 years

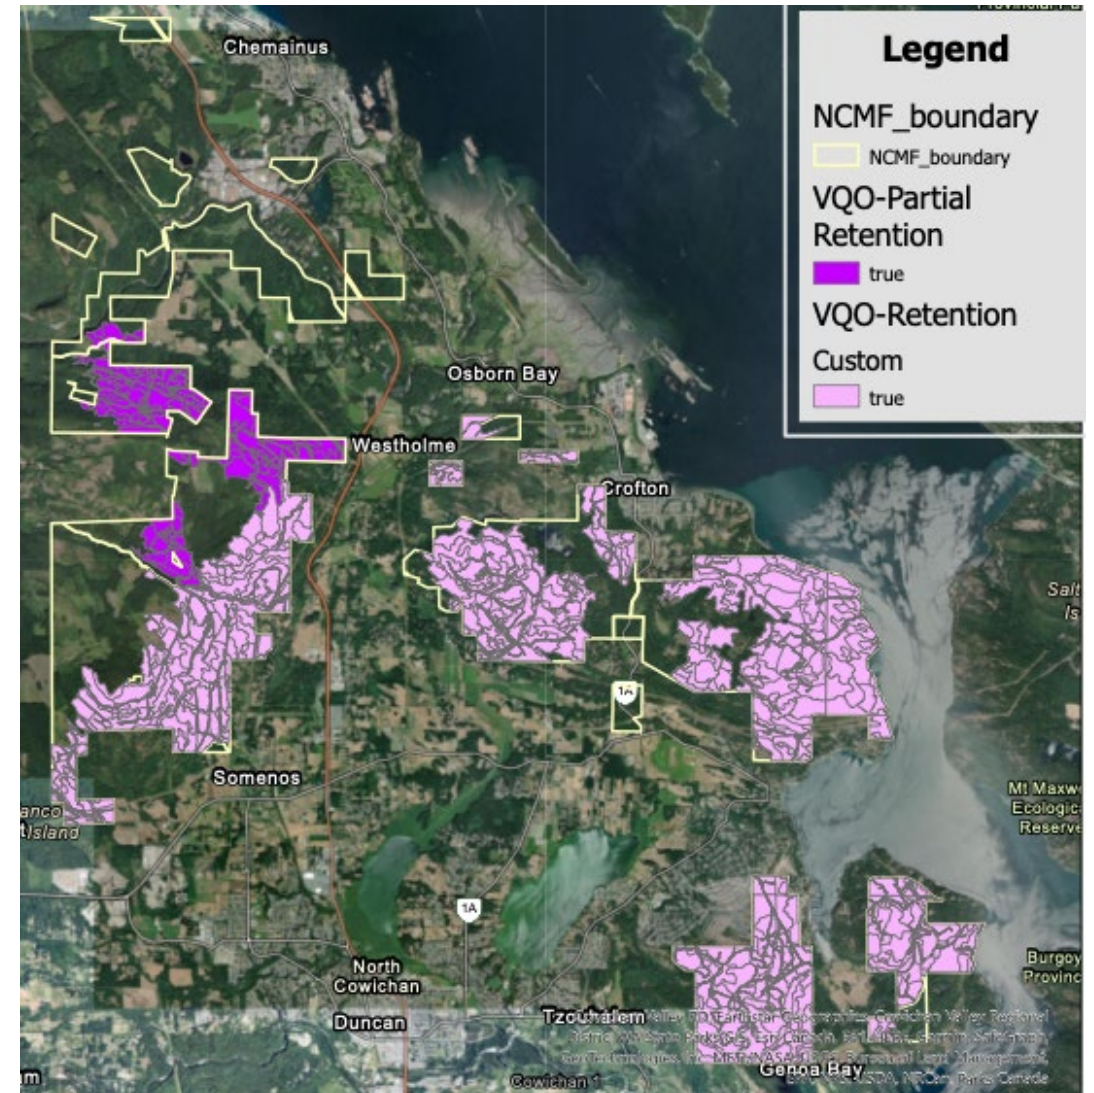

# Evaluating Outcomes of Scenarios: Results

## Social Indicators: Visual Quality Objectives (3.1.1)

- VQ Study conducted for MFR
- Considerable area identified as both Retention (R) & Partial Retention(PR) requirements
- **Implications for timber availability in Scenario 1**

VQO CLASS	Ideal*	Actual	
	% Ret	% Ret	
Scenario		1. Status Quo	2. Red Harvest
Retention	85	55	85
Partial Retention	50	35	50

\*Based on BC VQO guidelines

# Evaluating Outcomes of Scenarios: Results

## Social Indicators: Visual Quality Objectives (3.1.1)

- VQ Study conducted for MFR
- Considerable area identified as both Retention (R) & Partial Retention(PR) requirements
- **Implications for timber availability in Scenario 1**

VQO CLASS	Ideal*	Actual	
	% Min Ret	% Min Ret	
Scenario		1. Status Quo	2. Red Harvest
Retention	85	55	85
Partial Retention	50	35	50

\*Based on BC VQO guidelines

Scenario	Average VQO Score* (0-1)
Status Quo	0.69
Reduced Harvest	0.90
Active Conseravation	0.95
Passive Conservation	1.00

\*Where ratio actual/target ret is used to determine score

Scoring

>0.8 = Exceeds min retention

0.8 = Meets min retention objectives

<0.8 = does not meet min retention objectives

# Evaluating Outcomes of Scenarios: Results

## Social Indicators: Fire Risk (3.4.1)

### District of North Cowichan Community Wildfire Protection Plan

Fuel type	Description	Fire Risk
C-2	Young conifer (Fd) stands (5-20yrs)	High
C-3	Young conifer (Fd) stands (40-80 yrs)	Moderate
C-4	Pole sapling stand (Fd) (20-40 yrs)	High
C-5	Mature conifer (Fd) > 80yrs	Low
M-2	Mix of deciduous and conifer	Low
S03	Slash from recently harvested	Low

# Evaluating Outcomes of Scenarios: Results

## Social Indicators: Fire Risk (3.4.1)

Risk	Risk Score	Scenario			
		1	2	3	4
		Avg area in each risk category			
High	10	1,325	990	768	722
Moderate	5	2,186	2,385	2,564	2,592
Low	2	1,474	1,609	1,653	1,671
Score		5.4	5.0	4.8	4.7

Status Quo

■ High ■ Moderate ■ Low ■

Reduced Harvest

■ High ■ Moderate ■ Low ■

Active Cons

■ High ■ Moderate ■ Low

Passive Cons

■ High ■ Moderate ■ Low

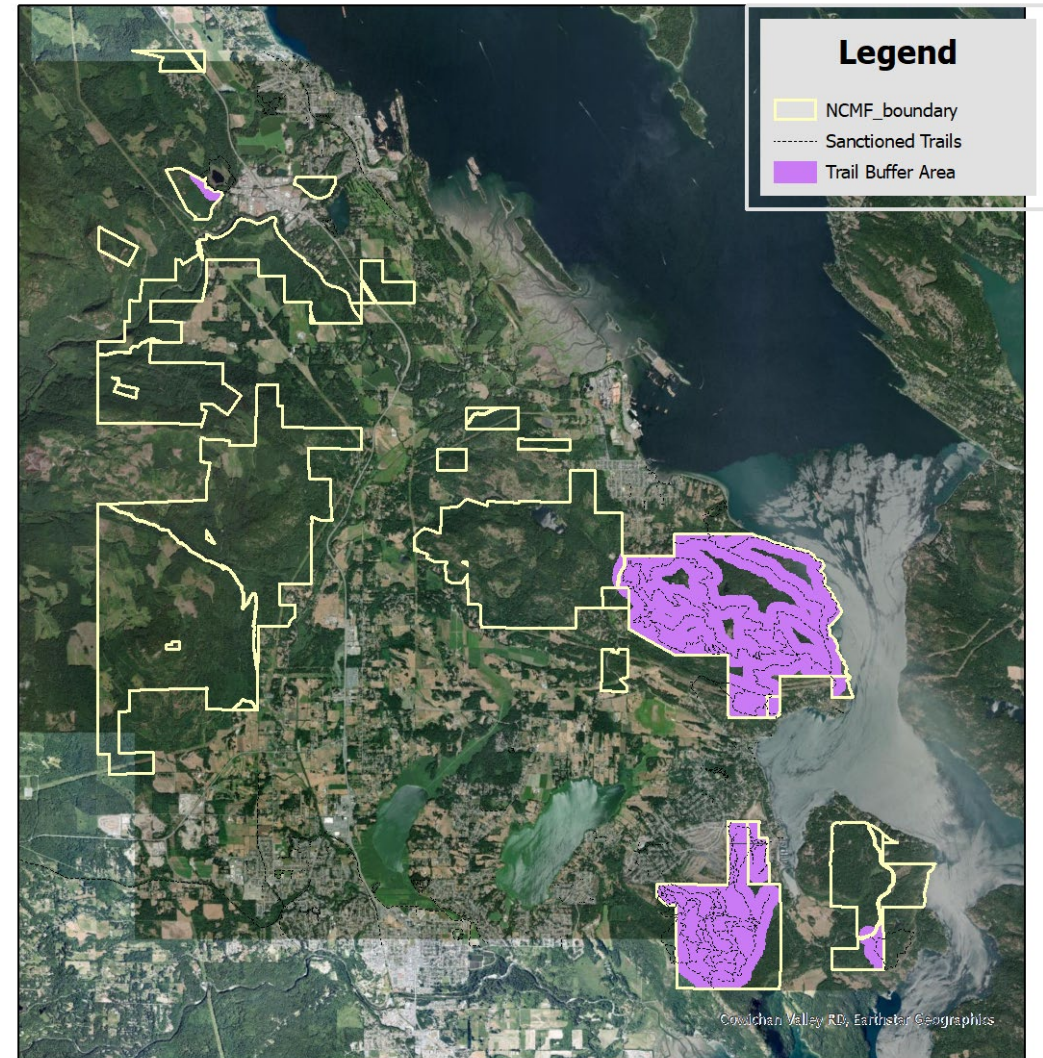

# Evaluating Outcomes of Scenarios: Results

## Social Indicators: Wilderness Recreation Opportunity (3.2.1)

### 3.2.1 Disturbed area surrounding (200m buffer) sanctioned trail network (%)

Scenario	Average disturbed area within trail buffer (ha, %)*
Status Quo	233.6 (16.5%)
Reduced Harvest	85.3 (6.0%)
Active Conservation	0 (0%)
Passive Conservation	0 (0%)

\* For first 50 years of simulations

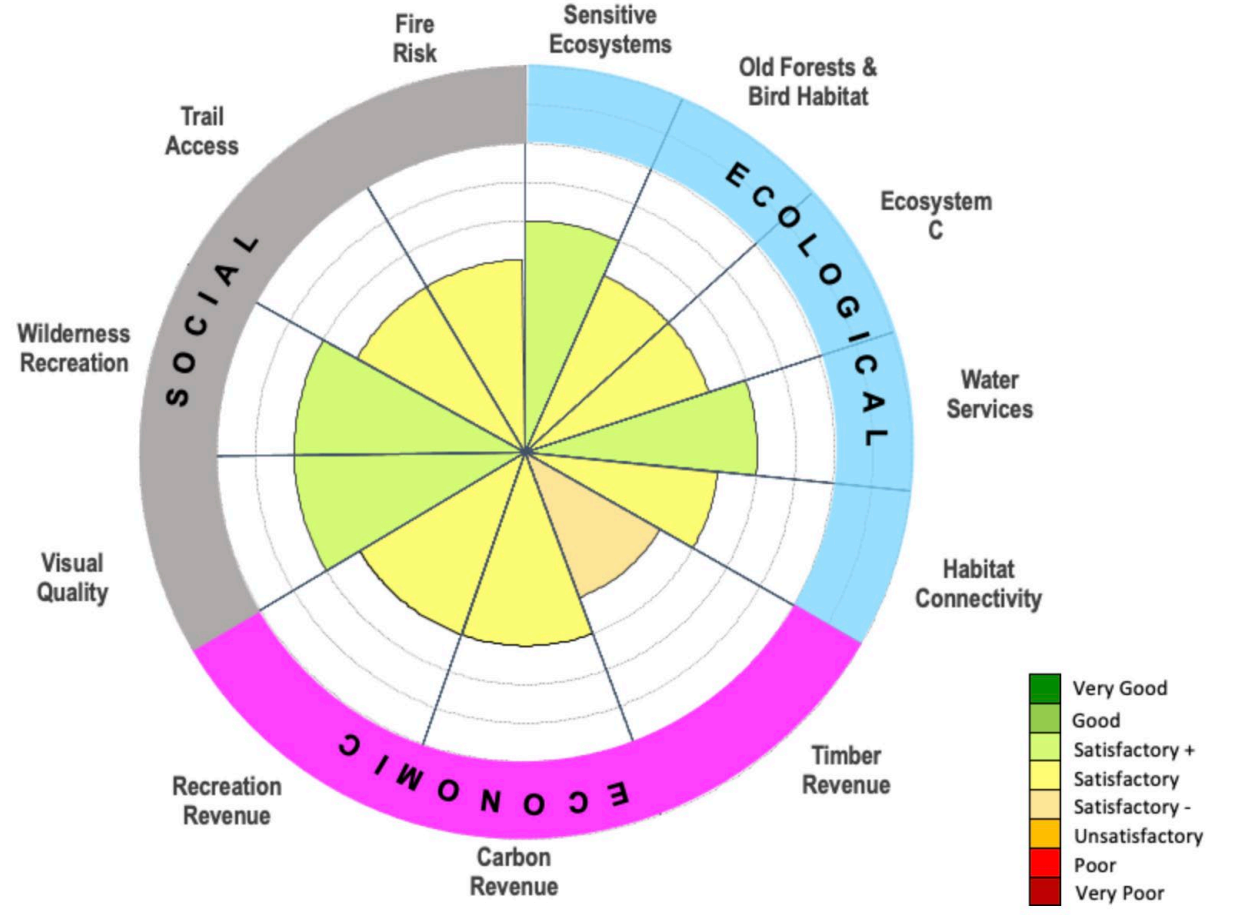

# Evaluating Outcomes of Scenarios: Results

## Status Quo

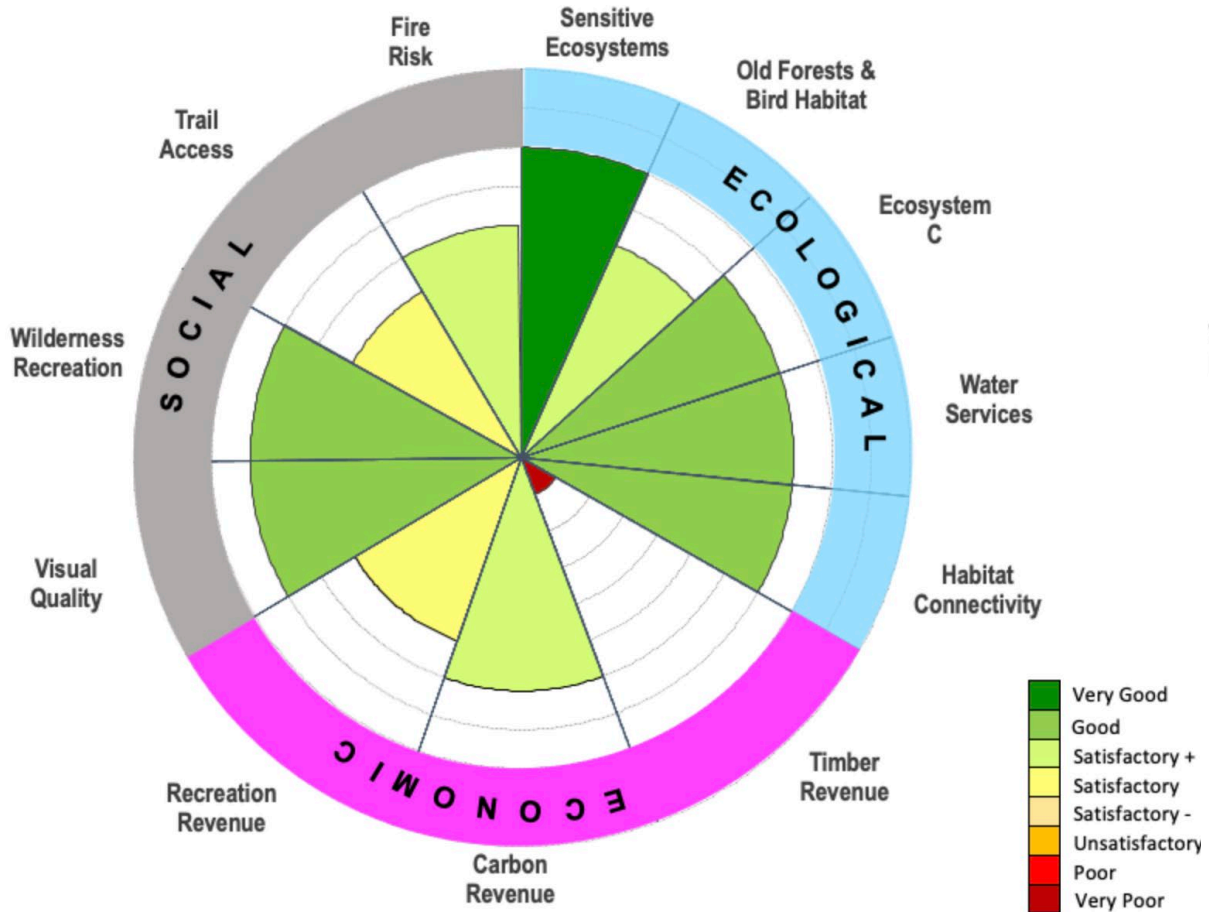

## Reduced Harvest

# Evaluating Outcomes of Scenarios: Results

## Active Conservation

## Passive Conservation

# Evaluating Outcomes of Scenarios: Results

## Scenario Ranking Option

- Assign numerical score based on categorical ranking
- Calculate average score of indicators in each component

	Status Quo	Reduced Harvest	Active Conservation	Passive Conservation
Ecological Score	4.2	5.4	7.0	7.0
Economic Score	4.7	4.7	4.0	4.3
Social Score	4.5	5.5	6.3	6.5
<b>Overall Score</b>	<b>4.5</b>	<b>5.2</b>	<b>5.8</b>	<b>5.9</b>

Category	Score
Very Good	8
Good	7
Satisfactory +	6
Satisfactory -	5
Satisfactory	4
Unsatisfactory	3
Poor	2
Very Poor	1

# Multi-objective Scenario Analysis

## Next Steps

- Help prepare summaries for public engagement process
- Consider running additional scenarios
- Prepare report for NC to aid in development of future forest planning
- Transfer materials/data to NC
